EMPLOYER / COMPANY PROFILE

PROVISION OF MANPOWER AND SUPERVISION, TECHNICAL SERVICES AND PROJECT MANAGEMENT FOR INSTALLATION, COMMISSIONING, REPAIR, OVERHAUL AND MAINTENANCE OF POWER GENERATION EQUIPMENT AND ASSOCIATED PLANT FOR INDUSTRIAL, PETROCHEMICAL AND NUCLEAR APPLICATIONS

EXECUTIVE SUMMARY

I would like to thank all the FieldCore leadership teams for the opportunity and resources to enable me to conduct this maintenance audit. It was a pleasure working with both the management and staff. Specifically, I would like to thank all the FieldCore Canada operations management and execution teams for their assistance throughout the audit process as it ensured the audit went smoothly and efficiently. I would also like to thank all the frontline supervisors and employees for their active and honest participation in the interview process and assistance during the site visits, the health and safety program and the commitment each of them has made to ensure the health and safety of each other.

The audit was conducted between November 14, 2024 and December 27, 2024. This 2024 maintenance audit was completed using the Alberta Association for Safety Partnerships protocol. The audit process consisted of three forms of verification which were documentation review, employee interviews and an observation tour. Documentation was reviewed to ensure proper execution of the system. Personal interviews were completed using the audit tool. The interviewees were completed according to the organizational structure and job descriptions. All levels were sampled. An observation tour was conducted to identify any hazards and to ensure employee understanding.

The Audit Report consists of ten elements, the questions in each element, the possible points and points awarded for each question and detailed general comments, noted strengths and key strengths, suggestions for improvement and key suggestions for improvement. The points are awarded based on positive indicators for each question as verified by the Auditor through documentation, interviews, and observations.

This Executive Summary highlights some of the key strengths and recommendations made in this audit report; *however, it is a requirement for all suggestions for improvement made throughout this report be addressed in your annual action plan.*

Element One - Management Leadership & Organizational Commitment

Key Strengths: FieldCore has implemented multiple strong and consistent communication mediums to maintain management involvement and championing of health and safety discussion and communication with all level of employees. noticeable example among many, is the weekly global safety meeting/call (Monday) led by the President/CEO. This effort does not only demonstrate management commitment but also promotes employee involvement and trust in the systems and lead to strengthening the overall company OHSM.

Suggestions for Improvement: Although the company make its health and safety policy available to employee through multiple mediums, this audit revealed employees revealed only over half employee were aware or able to discussed the policy contents. Auditor recommend the company make action plan to communicate the policy contents as part of its monthly staff call or meeting to improve better awareness among employees.

Element Two - Hazard Identification and Assessment

Key Strengths: FieldCore has implemented established repository (method library) system used for storing and tracking revisions for all formal hazard assessments and the related safe work practices (aka field procedures) for all the different technologies of turbines equipment it works on. Notability while each formal hazards assessment can easily download separately, they are also linked to specific task by been embedded into the related work procedure This repository is readily accessible to all its employees from any locations. This system does not only promote consistency but also promote the use of work-related hazard controls and drive employee's safety

Suggestions for Improvement: Based on the sampled interviewees, only 6/13 have been involved in formal hazards assessment development or review. Auditor recommend company involve workers who are directly involved in the company jobs in the development and review of formal hazard assessment, by doing so will ensure the people who has the first-hand experience on the

hazards related to their work are involved in the process doing this will ensure the appropriate hazards are assessed and control identified, to help prevent incident and injuries.

Element Three - Hazard Control

Key Strengths: FieldCore has implemented well established system called read across (RA) which focus a group on sharing the lessons learned from health and safety event(s) as well as the appropriate corrective and preventative actions implemented. This RA are shared with focus group of employees (e.g. lead technical field advisor or engineer, outage manger) to create broader awareness of the lesson and understand where next potential failure or serious injury may occur. This process allows the company to grow and become stronger together by leveraging team work and collective benefit to employee health and safety

Suggestions for Improvement: Audit review identified the latest revision of the harassment policy 2020ver and the violence policy last revision was 2017, which are more than 3yrs as required per AB OHS legislation requirements. Consequently, the auditor recommends for the company to revise both policies at least every 3yrs. Doing this ensures the company consistently meets the Provincial OH&S legislative requirement as well as enhances the overall continued improvement of the company program.

Element Four – HS Committee/HS Representative.

Key Strengths: No key strength could be identified or written for this element due to the company score of 0% in the element due to no existence of the required health and safety committee with associated programs.

Suggestions for Improvement: Audit review identified that FieldCore not written terms of reference in place for health and safety committee or representative. Auditor recommend for the company to immediately institute a written terms of reference for a health and safety committee since the company is currently regularly employed more than 20 employees in the Province of Alberta. Doing will not ensure the company meets the Alberta OH&S requirements but also enhances continued workers cooperation, consultation and participation in FieldCore's company's health and safety management system improvement.

Element Five - Qualification, Orientation and Training

Key Strengths: It was identified that FieldCore has implemented a robust and ongoing employee technical and hands on training programs that incorporate a combination of months of in class, field and on the job, training concepts in relation to the employee specific profession area. This effort does not only boost employee professional skills and confidence, but promote overall health and safety as they are less prone to error.

Suggestions for Improvement: Audit finding identified that FieldCore employee Orientation contents do not include or discuss the following requirement, i) harassment & violence, ii) right to participate and iii) right to know. Auditor recommend the company update the orientation to include this content. Doing this will ensure employees are not only properly informed of their OH&S legislative rights and obligation but also to help prevent incident and injury

Element Six – Other Parties in the Vicinity

Key Strengths It was identified FieldCore has implemented a consistent process and system for planning their project executions at Customer site well in advance usually as far as 18months in advance. these strategies ensure all parties including customers, contractors and all relevant affected parties including health and safety teams are involved in good time to provide adequate timeline for conduction proactive activities like project risk assessment and implement remedial actions prior to the execution teams go to site. This effort ultimately enhances the health and safety of all employees.

Suggestions for Improvement: As this element scored 100% - no SFI was required.

Element Seven - Inspections

Key Strengths: It was identified FieldCore through its robust inspection programs has implemented multiple inspection format and

tools that are specific and targeted towards its high-risk operations, notable among many is the putting people to work safely audit (aka P2W). P2W utilizes the plan do check act strategy in real time to audit the 10 steps the company uses to put its employees to work. This effort not only promote the effectiveness of the inspection process but also the strength of the safety management systems.

Suggestions for Improvement: Audit finding from documentation review identified the large number of workers are not consistently completing/participation in inspection as required. Therefore, its auditor recommendation that create action plan to promote higher worker participation such as using of the various workers engagement forum re-enforcing expectation. Doing this will not only aid promote more workers involvement engine in the inspection process but will also drives greater awareness of workplace safety and overall continued improvement of the company health and safety programs

Element Eight – Emergency Response

Key Strengths: FieldCore has implement a strong emergency preparedness response program including security alert systems that ensure all employees traveling or working at any location in the country or globe proactively notified through mobile or email of impending disaster warning including extreme weather, environmental, security or public disturbance related to their location. This system ultimately promotes the health and safety of employees in respective of their location but also enhance the continued improvement of the company health and safety management systems.

Suggestions for Improvement: Audit review did not find any record of emergency response drill conducted for Edmonton office for the past 12months. Auditor recommend the company to consider preforming drill exercise for the Edmonton office to meet the requirement of the plan and ensure employee are fully informed on the potential emergency scenario related to that facility

Element Nine – Incident Investigation

Key Strengths: It was identified FieldCore has implemented the process that make it mandatory that complete investigation using systematic method must be completed for all health and safety incidents in respective of the severity. This ensure every learning opportunity are explored and lesson learned are leveraged toward the overall health and safety of employee and enhancement of the OHSM

Suggestions for Improvement: As this element scored 100% - no SFI was required.

Element Ten - System Administration

Key Strengths: During the observation tour to active worksites, it was identified that FieldCore nine (9) life saving rules (LSR) posters with distinctive and conspicuous pictographs of each of the LSR where strategically posted around the company work areas including the lunchroom, turbine cogeneration building. This not along demonstrate the company strong safety culture but also promote employees and other worksite awareness and adherence to the life saving rules and promote overall health and safety of everyone working for or near FieldCore's operation.

Suggestions for Improvement: Finding indicated the company did not develop an action plan as result of the company previous OHSM audit result because there was not deficiency found. However, the auditor recommendation that the company to always develop an action plan from the outcome of every OHSMS audit where there are deficiencies or not. Doing this does not only ensure the company conform to the COR programs requirements but will mostly importantly ensures identified actions or improvement opportunities are considered and communicated to employees. And in turn aids to strengthen and promote continued improvement of the company overall occupational health and safety management systems.

In summary, overall FieldCore performance in this audit is impressive. And it's the auditor believe that the company's health and safety management system will be more strengthen when all the improvement suggestions in this audit report including those highlighted in this executive summary are promptly completed.

Thank you.

Sincerely,

SOLOMON AIREBAMEN| Internal Auditor

1 | MANAGEMENT LEADERSHIP AND ORGANIZATIONAL COMMITMENT

Management commitment and leadership is the essential foundation for a successful occupational health and safety management system (OHSMS). Management and employees working cooperatively together is required for a health and safety system to succeed.

1.1 Is there a written Health and Safety Policy signed by the current senior manager? (5 points)	Method	Percentage	Points
	Documentation	100%	5/5

GUIDELINES

Verified by reviewing written policy.

To award the 5 points, the policy must be signed by the current senior manager, and must include:

- declaration of management commitment to health and safety that addresses physical, psychological, and social well-being
- general health and safety responsibilities of managers, supervisors, workers, and contractors
- The expectation is that employees will comply with applicable legislation and the organization's own health and safety standards.

Points are awarded based on 100% positive indicators from documentation.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of the copy of the 2024 FieldCore environmental, health and Safety policy statement indicated the company met 5/5 of the contents including:

- Declaration of management commitment to health and safety that addresses physical, psychological, and social well-being
- General health and safety responsibilities of managers, supervisors, workers, and contractors
- The expectation is that employees will comply with applicable legislation and the organization's own health and safety standards.

Also, the policy was noted to be signed by the current President/CEO

1.2 Is the Health and Safety policy readily available to employees? (0-5 points)	Method	Percentage	Points
	Observation	100%	5/5

GUIDELINES

Verified by observation.

The current policy may be posted on bulletin boards, in lunchrooms and/or any areas accessible to employees. It may also be in employee handbooks, safety manuals, and/or downloaded or stored electronically.

Notes must describe where the policy is located, and how it is made accessible to all employees at that location.

Points are awarded based on the percentage of locations the policy was available.

Provide details/examples.

FINDINGS / NOTES

From Observation sampling: observation tour of all sites indicated the FieldCore current health and safety policy is available and accessible to employees through multiple avenues including as follows:

- Edmonton Office [5/5] posted in the bulletin boards and electronically (EHS SharePoint)
- Firebag [5/5], and Thorold Cogen [5/5] posted in lunchroom, as part of project EHS plan and electronically (EHS SharePoint)

1.3 Is the health and safety policy communicated to employees? (0-5 points)	Method	Percentage	Points
	Interview	100%	5/5

GUIDELINES

Verified by senior manager, manager, and supervisor interviews.

Interviewees must be able to describe how they ensure that the policy is communicated to employees.

If the organization does not have supervisors, this question can be asked to only managers.

Points are awarded based on the percentage of positive responses.

Provide details/example(s).

FINDINGS / NOTES

From interviews: Interview of senior managers, managers and supervisors indicated FieldCore policy is effectively communicated and made available to employees through various medium including:

- posted electronically in company EHS SharePoint (intranet)
- through annual review sign off curriculum assignment to employees (via SuccessFactors -employee personal portal)
- electronic communication - email and virtual calls
- through project/outage EHS kick up meetings
- regular staff/employee meetings (monthly, bi-weekly)

1.4 Are employees aware of the health and safety policy's content? (0-5 points)	Method	Percentage	Points
	Interview	65%	3/5

GUIDELINES

Verified by employee interviews.

Employees must be able to explain, in general terms, the policy's content.

Points are awarded based on the percentage of positive responses.

Provide details/examples.

FINDINGS / NOTES

From interviews: interview of senior manager, manager, supervisors and workers identified the policy was more clearly understood by little over half of the employees interviewed. Some noted positive response from majority of the management stated some of the contents in the policy such as commitment to protect health and safety of all employee and reduce injury to everyone affected by company operations. However, the common phrase heard during the audit interview from all employee's levels was health and safety is everyone responsibility.

Negative response identified although majority of the employees agreed to annual acknowledgement of the policy, but close to half of them (both at management and worker level) could not remember or state the exact contents as listed in the policy statement. instead, they confused the content of the policy statement with other aspect of the company OHSMS internal responsibility programs/process such as Fatigue management policy, LOTO procedures, workplace harassment policy, etc.

SUGGESTIONS FOR IMPROVEMENT

Although the company make its health and safety policy available to employee through multiple medium, this audit revealed employees revealed only over half employee were aware or able to discussed the policy contents. Auditor recommend the company make action plan to communicate the policy contents as part of its monthly staff call or meeting to improve better awareness among employees.

1.5 Have specific health and safety responsibilities been written for all levels? (0-10 points)	Method	Percentage	Points
	Documentation	100%	10/10

GUIDELINES

Verified by reviewing documentation, other than the policy (e.g., job descriptions, and health and safety manuals, staff handbooks, etc.).

There must be responsibilities written for all applicable employee levels:

- Senior Managers
- Managers
- Supervisors
- Workers

Points awarded based on the percentage of positive indicators.

Provide details/example(s).

FINDINGS / NOTES

From documentation: verification was performed through review of combination of staff job matrix, field job matrix, job description documentations and EHS programs/procedures. Based on auditor review of the aforementioned, the review identified the FieldCore have written health and safety responsibilities and accountabilities for all the different level of employees through various process. such as the inclusion of RACI (responsible, accountable, consulted, informed) matrix in almost all of the health and safety procedures and programs.

1.6 Do employees understand their:		Method	Percentage	Points
	a	Interview	100%	5/5
	b	Interview	86%	4/5

GUIDELINES

Verified by employee interviews.

Employees must be able to identify the three OHS rights (right to know, right to participate, right to refuse dangerous work). Employees must be able to explain their health and safety responsibilities (both company and legislated).

Points are awarded based on the percentage of positive responses.

Provide details/examples.

FINDINGS / NOTES

Verified by employee interviews: Indicated larger population of employees fully understood the three basic OH&S rights and responsibilities under the rights.

Example of employees positive responses for their OH&S legislated rights included i) right to know e.g. to be informed of the hazard and risk affecting their workplace and the controls available; ii) right to participate: e.g. their obligation to participate in hazard identification activities, pre-task hazard assessment etc.; iii) right to refuse e.g. the obligation to refuse to do any work activities that will negatively impact their health and safety at the workplace. Further examples heard on the company responsibilities included: i) all employees must be educated on the company health and safety policies, procedures, and hazard identification and controls that affects their health and safety e.g. health and safety training assignments annually to all employees, access to task risk analysis etc. ii) all employees are required to participate in health and safety meetings, to use risk controls measure provided by the company in relation their work e.g. safety meetings, pre-lift meetings, toolbox talks, use of scaffold, PPE use, etc. for protection of incident and injury at their workplace.

Negative responses were from few newer employees that could not properly understood nor explained most of their legislated health and safety responsibilities in relation the AB OH&S.

SUGGESTIONS FOR IMPROVEMENT

Although majority of employees were able to discussed their basic OH&S rights, but few were unable to explained their legislated health and safety responsibilities. Auditor recommends company utilize one of its regular employee engagement forums such as the monthly employee meeting to discuss workers legislated health safety responsibilities to ensure every employee have adequate knowledge of their workers responsibilities as specified in the AB OH&S legislation

1.7 Do managers and supervisors understand their responsibility for the health and safety of the workers under their supervision? (5 points)		Method	Percentage	Points
		Interview	100%	5/5

GUIDELINES

Verified by manager and supervisor interviews.

Managers and supervisors must be able to describe how they ensure the health and safety of the employees under their supervision.

Points are awarded based on a minimum 80% positive responses.

If the organization does not have supervisors, this question can be asked to only managers.

Provide details/examples.

FINDINGS / NOTES

Verified by manager and supervisor interviews: Identified they are adequately aware they are held account for the health and safety responsibilities in relation the health and safety of employees under them. Managers and supervisor in FieldCore are consistently held accountable for their responsibility and engagement towards maintaining the health and safety of the people under their control. This audit revealed managers and supervisor are actively involved in process and effective activities for sustaining positive health and safety culture and prevention of injury in their workplaces, such as below:

- actively monitoring of employee competency/ training
- Safety meetings including toolbox talks at site level
- project EHS kick off meetings
- health and safety performance reviews
- supervisory oversight in employees use hazard identification processes.

1.8 Are employees evaluated on their individual health and safety accountabilities? (0-10 points)	Method	Percentage	Points
	Interview	95%	10/10

GUIDELINES

Verified by employee interviews.

Employees at all levels must be able to explain the system that is used to evaluate their accountabilities for their OHS roles and responsibilities. These can include:

- Performance appraisals
- Discipline policy/process for non-performance
- Letters from employer
- Positive reinforcement by supervisors
- Job safety observations
- Management and supervisor reviews, etc.

Points are awarded based on the percentage of positive responses.

Provide details/example(s).

FINDINGS / NOTES

Verified by employee interviews: Verify the company evaluate employees' accountabilities in health and safety at all levels. Positive response indicated that managers and supervisors are evaluated for through various processes such as annual performance appraisal, participation in inspection programs, health and safety KPI performance, and strong health & safety target achievement. Similarly, workers are evaluated through their annual performance evaluation/appraisal, job inspections and concerning reporting participation, through supervisory oversights, reward and recognition incentives, disciplinary measures for health and safety violation.

Negative response was in relation to few workers could not specifically explained or comment on how employees' accountabilities in for health and safety is evaluated, but instead confused their response by explaining how they are involved in

health and safety programs and activities.

1.9 Does senior management communicate to employees, at least annually, the organization's commitment to health and safety? (10 points)	Method	Percentage	Points
	Interview	96%	10/10

GUIDELINES

Verified by employee interviews.

Notes must include examples of how senior management communicates health and safety commitment.

Points are awarded based on a minimum 80% positive responses.

Provide details/examples.

FINDINGS / NOTES

From interviews: identified through employees' interview indicated the company have a strong health and safety communication programs. Positive response identified some the established frequencies and program /process used by FieldCore senior management deployed to communicate health and safety commitment to employees:

- annual business health and safety priority & strategy communication (global and regional)
- monthly and weekly health and focus topics communication -e.g. life saving rules
- monthly employee's meeting/calls by North American GM (aka (staff office hour)
- periodic and ongoing health and safety programs improvement process e.g. kaizen, lean action workout, problem saving exercises (PSR).

Negative responses heard were from few interviews who were not able to provide clear examples or explanation of the medium utilizes by the company senior management to communicate their health and safety commitments.

STRENGTHS

FieldCore has implemented multiple strong and consistent communication mediums to maintain management involvement and championing of health and safety discussion and communication with all level of employees. noticeable example among many, is the weekly global safety meeting/call (Monday) led by the President/CEO. This effort does not only demonstrate management commitment but also promotes employee involvement and trust in the systems and lead to strengthening the overall company OHSMS.

1.10 Does senior management demonstrate commitment by participating in health and safety activities? (10 points)	Method	Percentage	Points
	Interview	100%	10/10

GUIDELINES

Verified by employee interviews.

Employees must identify how senior management demonstrates their commitment by participating in health and safety activities (e.g., site tours, participate in inspections or committees, using hazard controls, etc.).

Points are awarded based on a minimum 80% positive responses

Provide details/examples.

FINDINGS / NOTES

From interviews: verifies that FieldCore senior managements are consistently engaging in health and safety activities through their visible participation in various health and safety related tasks. Positive response included senior management active involvement in several events that consistently demonstrates their commitment to the company health and safety management systems, such as below:

- Senior manager visits (SMV) inspections during projects execution at customer sites.
- Empower You Call & Project Kick off Meeting -to promote health & safety empowerment message at the start of projects at customer sites.

1.11 Is current health and safety legislation readily available at all work sites? (5 points)	Method	Percentage	Points
	Observation	67%	0/5

GUIDELINES

Verified through observation at work sites.

The current occupational health and safety legislation (e.g., federal and/or provincial) appropriate to the operation of the work site(s) must be readily available.

Points are awarded based on 100% positive indicators from observations.

Provide details/example(s).

FINDINGS / NOTES

From observations: Auditors sites tour identified that although the company made good effort to make copies of occupational health and safety readily available to their employees, but are not readily available to employees in every of the company active work locations. Negative finding included auditor inability to find any physical copy at FieldCore work location at one of the 3 sites visited as per shown below:

- **Observation sampling:** Edmonton Office [5 / 5], Firebag [5 / 5], Thorold Cogen [0 / 5]

SUGGESTIONS FOR IMPROVEMENT

During site tour one of the Ontario site, auditor could not find any hard copy of the provincial ON OH&S legislation handbook readily available in FieldCore work location. To meet this requirement and ensure employees have ready access to the legislation, auditor recommend the company consistently provide or allocate copies of current Occupation health and safety legislation booklets to every site in every province of operation.

1.12 Does management participate in meetings where health and safety is discussed? (0-10 points)	Method	Percentage	Points
	Documentation	93%	9/10

GUIDELINES

Verified by meeting minutes.

To award points there must be documented evidence of management participation in meetings where health and safety is on the agenda, outside of health and safety committee meetings.

Points are awarded based on the percentage of positive indicators of sampled meeting minutes.

Provide details/example(s).

FINDINGS / NOTES

From documentation: identified management actively participation and involvement in health and safety discussion forums. Positively finding indicated senior management and managers actively attends and are involved in leading health and safety discussions through multiple company forums as below:

- Weekly Global Safety Meeting led by FieldCore President/CEO
- Monthly Canada Team call lead by Resources Manager & REHSM
- Toolbox talks, Weekly Safety Meeting at Customer sites (projects)

Negatively findings is in relation to few instance during FieldCore operation /projects at Customer site where auditor couldn't find documented evidence of manager participation in some meetings (e.g. toolbox talk or weekly safety meetings) as sampled.

1.13 Does the employer provide resources needed to implement and improve health and safety? (0-10 points)	Method	Percentage	Points
	Interview	100%	10/10

GUIDELINES

Verified by employee interviews.

Interviewees must be able to describe health and safety resources provided (e.g., paid time, equipment, training, materials, and budget dedicated to health and safety needs, etc.).

Points are awarded based on the percentage of positive responses.

Provide details/examples.

FINDINGS / NOTES

Verified by employee interviews: Identified that FieldCore provides their employees adequate resources to sustained and improved the company health and safety culture and performance. Positive response from all employees confirmed FieldCore consistently provides the resources and programs to enable them implement and improve health and safety and promote positive culture among employees including contractors in their various workplaces. Examples of resources provided includes:

- allocation of health and safety personnel for all projects
- investment in improved tooling and personal protection equipment
- budge allocation for health and safety rewards/ recognition programs

2 | HAZARD ASSESSMENT

A **formal hazard assessment** takes a close look at the overall operations of an organization to identify hazards, measure risk (to help prioritize hazards), and develop, implement and monitor related controls. Worker jobs or types of work are broken down into separate tasks. Formal hazard assessments are detailed, can involve many people, and will require time to complete.

A **site-specific hazard assessment** (also called field-level) is performed before work starts at a site and at a site where conditions change or when non-routine work is added. This flags hazards identified at the location (e.g., overhead power lines, poor lighting, wet surfaces, extreme temperatures, the presence of wildlife), or introduced by a change at the work site (e.g., scaffolding, unfamiliar chemicals, introduction of new equipment). Any hazards identified are to be eliminated or controlled right away, before work begins or continues.

2.1 Have all jobs/positions been identified for the formal hazard assessment process? (0-10 points)	Method	Percentage	Points
	Documentation	100%	10/10

GUIDELINES

Verified by reviewing documentation.

Documentation review should include a comparison of job listings (organizational chart, job inventory document, job descriptions, staff listings, etc.) to formal hazard assessment documentation to show that they have been inventoried (formal hazard assessments, task inventories/matrices, etc.). Formal hazard assessment documentation may have the jobs/positions grouped together into common areas (e.g., field, office, administration) as part of the inventory.

Notes must include examples of the jobs/positions identified, and any that were missed.

Points are awarded based on the percentage of jobs and/or occupations inventoried compared to the number required as identified on staff listings or organizational charts. Sampling is not acceptable for this question.

FINDINGS / NOTES

From documentation: review of FieldCore Canada Operations org chart, staff and field job matrix(s), formal hazard assessment repository and risk management procedure indicated 10/10 of job positions were identified for the purpose of task hazards assessment. Through review of the aforementioned documentations and comparison with the requirements task positions are grouped into two major categories as (i) office/staff and (ii) field as per below:

- Edmonton Office [head office] (33/33 task positions assessed)
- Firebag site (25/25 task positions assessed)
- Thorold Cogen site (21/21 task positions assessed)

STRENGTHS

FieldCore has implemented established repository (method library) system used for storing and tracking revisions for all formal hazard assessments and the related safe work practices (aka field procedures) for all the different technologies of turbines equipment it works on. Notability while each formal hazards assessment can easily download separately, they are also linked to specific task by been embedded into the related work procedure This repository is readily accessible to all its employees from any locations. This system does not only promote consistency but also promote the use of work-related hazard controls and drive employee's safety

2.2 Has the employer compiled a list of tasks associated with each job/position? (0-20 points)	Method	Percentage	Points
	Documentation	90%	18/20

GUIDELINES

Verified by review of formal hazard assessments.

The various tasks associated with each job/position must be identified. Notes must include examples, and list tasks that were missed.

Points are awarded based on the percentage of jobs/positions identified that have tasks associated. The **maximum** score allowed for this question will be determined by the total percentage awarded in question 2.1.

For example, if only 50% of the points are awarded in question 2.1 (e.g., 5 points), then a maximum of 50% (e.g., 10 points) can be awarded in question 2.2.

FINDINGS / NOTES

From documentation: review of the company organization charts in conjunction with the employees job description 33 tasks have been listed for the identified positions associated with the company main two main employee group. Auditor review of the identified tasks associated with the below positions and formal hazards assessment repository identified 31/33 tasks have been evaluated as per below:

1) Staff employees (Office /Admin Ops)

- Service Manager (2/2)
- Outage Manager (2/2)
- Resources Manager (2/2)
- EHS Manager (2/2)

2) Field employees (Field Ops) (2/2)

- Mechanical -turbine (6/6)
- Electrical- turbine (5/5)
- Controls - turbine (5/5)
- Generators Specialist (5/5)
- Borescope Inspection (BSI) Technician (2/4)

Negative finding indicated the two tasks for Borescope Inspection technician positions have not been evaluated. hence the following BSI tasks of i) Camera inspection and ii) Visual Inspection were not evaluated for formal hazard assessment .

SUGGESTIONS FOR IMPROVEMENT

Audit finding shown formal hazard assessment are not created or available for two task associated with Borescope inspection technician position. Audit recommend that formal hazard assessment to be created for all tasks associated with all positions to ensure employee are fully aware of the potential hazards and controls related to their job and to help prevent incident and injury among employees.

2.3 Identification of Health and Safety Hazards:		Method	Percentage	Points
a) Are health hazards identified for the tasks associated with each job? (0-10 points)	a	Documentation	90%	9/10
b) Are safety hazards identified for the tasks associated with each job? (0-10 points)	b	Documentation	90%	9/10

GUIDELINES

Verified by review of formal hazard assessments.

Confirm that both health and safety hazards have been identified for tasks where applicable (confirmed by question 2.2).

Notes must include examples of both health and safety hazards identified. A health hazard is anything that could harm someone's health, either immediately or over time. A safety hazard is anything that could cause injury or damage.

Consider the four categories for health and safety hazards, which include:

- Physical (e.g., radiological, working at heights, lifting heavy loads, extreme temperatures, violence, ergonomics, etc.)
- Chemical (e.g., fumes, vapours, gases, waste products, etc.)
- Biological (e.g., bodily fluids, viruses, bacteria, moulds, etc.)
- Psychological (e.g., harassment and bullying, stress, fatigue, etc.)

Score:

- 0 - 10 points for health hazards
- 0 - 10 points for safety hazards

Note: All hazard categories may not be applicable to every task identified on formal hazard assessments.

Points are awarded for each hazard type based on the percentage of tasks for which hazards have been identified. The maximum score allowed for this question will be determined by the total percentage awarded in question 2.2.

For example, if only 50% of the points are awarded in question 2.2 (e.g., 10 points), then only 50% (e.g., 10 points – 5 for each type) can be awarded in question 2.3. The scoring maximums for both health and safety hazards would be reduced to a maximum of 5 points each for this question.

Provide details/example(s).

FINDINGS / NOTES

From documentation: Reviewed of sampled task risk assessment of 2 main tasks (*office administrative work; motor vehicle operation*) associated with staff positions, the identified safety and health hazards are as below examples:

- Physical hazards (e.g. falling objects, thermal distress, elevated work platform, trailing cables, poor lighting, uneven surfaces, extreme (cold/heat) temperature)
- chemical hazards (e.g. fire, smoke, fumes,)
- Biological hazards (e.g. viruses, waste products, harmful bacteria)
- Physiological hazard (e.g. Fatigue, stress, ergo/WMSD)

In addition 16/16 task risk assessment were sampled for review for the following 3 field positions. [*Mechanical, Controls & Generators*) indicated both safety hazard and health hazard are identified as per the examples below:

2a) Examples of Health (16 /16 tasks had health hazards identified): Mechanical: Task: Install of 2nd Stage nozzle segments lower half

- Health Hazard: chemical spills; ergonomics; vibration, noise, virus,
- Controls: Task: Flame detector function test
- Health Hazard: chemical release, smoke/fumes from equipment
- Generators: Task: Clean and Inspect hydrogen seals /casing
- Health Hazard: chemical /hazardous substances; waste

2b) Example of Safety (16/16 tasks had safety hazards identified): Mechanical: Task: Install of 2nd stage nozzle segments lower half

- Safety Hazard: work at height, restricted space, manual handling, lifting operations, pinch points/LOF, use of tooling, sharp objects
- Controls:-Task: Flame detector function test
- Safety Hazards: uncontrolled energy (LOTO), working/walking surfaces, lighting conditions
- Generators: Task: Clean and Inspect hydrogen seals /casing
- Safety Hazard: dropped/falling objects, adjacent activities; electricity

Negative finding indicated the following *safety hazard (i.e. violence)* and *health hazards (i.e. harassment and bully)* were not identified in any of the task risk assessment samples reviewed.

SUGGESTIONS FOR IMPROVEMENT

Audit finding shown although some example of health hazards such as fatigue and stress were identified but in review of all the 18 sampled task risk assessments it was discovered the following safety hazards (i.e. *workplace violence*) and *health hazards (i.e. harassment and bully)* were not identified in any of the formal hazard assessment reviewed. Auditor recommend that the company to consider reviewing of applicable task risk assessment e.g. Office Work and Field jobs include psychological hazards such as bully, workplace violence.

2.4 Have the identified health and safety hazards been evaluated according to risk? (0-10 points)	Method	Percentage	Points
	Documentation	84%	8/10

GUIDELINES

Verified by review of formal hazard assessments to confirm that each hazard identified in question 2.3 has been individually assessed for risk to determine priority using a consistent approach of at least 2 factors (e.g., severity and likelihood). Notes must describe the system in use.

Points are awarded based on the percentage of health and safety hazards that have been assessed/prioritized.

The **maximum** percentage allowed for this question cannot exceed the average percentage awarded in question 2.3.

Provide details/examples.

FINDINGS / NOTES

From documentation: The auditor review of all the completed tasks with related task risks assessment in question 2.3. Auditor found that each task hazards were assessed using the below risk matrix of Severity (S1,S2,S3,44, S5) x Frequency(F1,F2,F3,F4,F5) and Consequence -including Risk Rating & Strategy of (Low, Medium, High). All hazards were consistently assessed using the above approach in conjunction with control strategy color coding of (Blue =low, Red= Medium and Green = High). This is an indication that the company uses a scale of one to five for each components with the rating of one as *low* and five as *high*.

A sampling review was performed for hazards assessments related to three jobs (*Mechanical, Controls and Generator*) and found each (30/30) identified hazards were evaluated for risk as required.

Negative Finding: Although all sampled completed formal hazard assessments had task identified and hazards evaluated, but auditor could not score greater than score awarded in question 2.3, the maximum percentage for this was determined by the by the parentage awarded in question 2.3.

SUGGESTIONS FOR IMPROVEMENT

Since auditor could not reviewed all formal hazards assessments related to all jobs, it could be determined if all health and safety hazards were identified/ evaluated. however, its auditor recommendation for company to address missing formal hazard evaluation for the two tasks in Borescope inspection position (i.e. camera, and visual inspection) and missing safety hazard (violence), health hazard (i.e. harassment & bully) information in all the company formal hazards assessment. When all formal hazards are complete, ensure to provide employees with awareness on potential hazards and controls in place to mitigate against incident and injuries.

2.5 Is senior management knowledgeable about the highest hazard tasks related to their operations? (10 points)	Method	Percentage	Points
	Interview	100%	10/10

GUIDELINES

Verified by senior manager interviews.

Senior management must be knowledgeable of the highest hazard tasks related to their operations (identified in question 2.4).

Points are awarded based on a minimum 80% positive responses.

Provide details/examples.

FINDINGS / NOTES

From interviews: Senior manager interview response identified they have good knowledge of many of the highest hazards associated to company overall operations 9i.e. office and field operations). Positive response identified some of the highest hazards as per below examples:

- Safety hazards: heavy lift (e.g. lift of turbine rotor); confined space activities, driving, extreme weather, uncontrolled energy (electrical, pressure, mechanical,), remote work
- health hazards: fatigue, fume /chemical exposures, stress, virus/diseases

2.6 Do the following participate in the formal hazard assessment process:		Method	Percentage	Points
	a	Interview	67%	0/5
	b	Interview	100%	5/5
	c	N/A		

GUIDELINES

Verified by manager/supervisor and HSC/HS representative interviews.

Confirm that management, supervisory levels, and HSC/HS representative are involved in the formal hazard assessment process, and/or in the regular review of formal hazard assessments.

If the organization does not have supervisors, then 2.6b can be N/A. 2.6c of this question can be N/A if the organization is not legislated to have a HSC/HS Representative.

Points are awarded based on a minimum 80% positive responses.

Provide details/examples.

FINDINGS / NOTES

Verified by manager/supervisor: a) Managers response identified some of them are involved only in the formal hazard assessment process as applicable to their roles. Positive response explained that managers who are involved in field projects evaluate their project scopes for applicable formal hazards assessment, collate them and made available to the project teams for use during the project execution phase. Negative response included from those managers who by their role are not involved in project executions and as such do not have direct responsibilities in the collation, development and or review of the formal hazard assessment.

b) Supervisor identified they are involved the development and review of formal hazards assessment that are needed for the scope of work under their supervision. Positive response identified supervisor participation in the process to include development and or review of formal hazards as per need basis as per the below scenario:

- collation or download of outage scope related task risk assessment from company risk assessment repository (method library) in preparation for project site mobilization
- ensuring all required task risk assessment are made readily available to the field employee and craft during project/outage execution
- development or updating task risk assessment for an emerging scope during project execution

c) N/A because FieldCore do not currently have a functional HSC/HS Representative.

SUGGESTIONS FOR IMPROVEMENT

Audit finding identified majority of managers are not involved in the formal hazards assessment process as required. Consequently, auditor recommend create an action plan to promptly address this gap and ensure managers are consistently participating in the development and or review of formal hazard assessments. Doing this will drive safer workplace and promote all level of employees' involvement in the hazards assessments process and strengthen the overall company OHSM systems.

2.7 Have workers participated in the development, and/or review of the formal hazard assessments? (0-10 points)	Method	Percentage	Points
	Interview	46%	5/10

GUIDELINES

Verified by worker interviews.

Workers must be able to describe how they participated in the development and/or review and revision of the formal hazard assessments and the identification of controls.

Points are awarded based on the percentage of positive responses.

Provide details/examples.

FINDINGS / NOTES

Verified by worker interviews: worker response identified majority of workers are not involved in the development and review of the company formal hazard assessment process. Based on interviewees responses, the company's formal hazard assessment process is owned and managed by a dedicated department (i.e. Method Library Team) who has the primary responsibility of development, review and revision.

Positive response indicated only 6 out of the 13 sampled interviewed worker have been involved in the formal hazards assessment development/ review process as per below examples:

- In 2023, interviewee help developed some task risk assessments (TRA) for steam turbine scopes that did not have existing task risk assessments in the FieldCore risk assessment repository (method library), and employee submitted the developed TRA to the EHS risk management team for final review and upload to the library for companywide (global) applicable.
- recently during 2024 spring outage season, interviewee help developed a new task risk assessment for a gas turbine emergent scope which did not have an existing task risk assessment available in FieldCore method library

Negative response identified that great numbers of workers do not or has never participated in the task risk assessment development and review.

SUGGESTIONS FOR IMPROVEMENT

Based on the sampled interviewees, only 6/13 have been involved in formal hazards assessment development or review. Auditor recommend company involve workers who are directly involved in the company jobs in the development and review of formal hazard assessment, by doing so will ensure the people who has the first-hand experience on the hazards related to their work are involved in the process doing this will ensure the appropriate hazards are assessed and control identified, to help prevent incident and injuries.

2.8 Are employees designated to lead the formal hazard assessment process trained? (0-5 points)	Method	Percentage	Points
	Documentation	100%	5/5

GUIDELINES

Verified by review of formal hazard assessments and training records.

Employees who lead the formal hazard assessment process (e.g., managers, supervisors, team leaders, etc.) must be trained.

Refer to completed formal hazard assessments to determine who lead employees are. Then refer to the training records to determine if these employees have completed training. Training may be done internally or by a third-party provider.

Points are awarded based on the percentage of positive indicators.

Provide details/example(s).

FINDINGS / NOTES

From documentation: Review of the employee Core LMS training record in conjunction with training requirement as specified in the company risk management procedure ((FC-GL-EHS-MAN-0501 v4)) identified the requirement are met. From auditor sample review of completed company LMS training record, identified 15 of 15 sampled employees have completed the required training (GE-EHS-640-Risk Assessment Development).

2.9 Is there a written policy and/or process to review formal hazard assessments? (5 points)	Method	Percentage	Points
	Documentation	87%	0/5

GUIDELINES

Verified by review of formal hazard assessment policy and/or process.

Documentation must confirm a requirement to review formal hazard assessments, and includes the following criteria:

- On a predetermined frequency to keep the results up to date
- When changes are made to the operation or work-related process
- When a new work process is introduced
- When site-specific hazard assessments identify a new hazard
- When an inspection identifies a new hazard
- When an investigation identifies a new hazard

Points are awarded based on 100% positive indicators from documentation.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of FieldCore risk management procedure (FC-GL-EHS-MAN-501) identified 4/6 of the specified requirement have been met by the company in relation to formal hazard assessment process.

Negative finding indicated the company risk management procedure did not contain the following requirements i) formal hazard assessment revision *on a predetermined frequency* and ii) criteria for updating formal hazard assessment *when an inspection identifies a new hazard*.

2.10 Are formal hazard assessments reviewed as per the policy and/or process? (0-5 points)	Method	Percentage	Points
	Interview	69%	3/5

GUIDELINES

Verified by hazard assessment lead interviews.

Hazard assessment leads are those that lead the hazard assessment process (e.g., managers, supervisors, team leaders, etc.).

Interviewees should be able to describe examples of formal hazard assessments that have been reviewed as per the policy and/or process. For example, if a new process has been introduced, or a new hazard has been identified from inspections or investigations.

Points are awarded based on percentage of positive responses.

Provide details/example(s).

FINDINGS / NOTES

From interviews: Manager and supervisors interviews identified they have had some level of responsibilities in formal hazards assessments are updated or revised to ensure it meet the requirement of the company risk management process /policy. Positive response indicated that managers and supervisors as per need basis has ensured the following as:

- ensure copies formal hazards assessment document available to frontline employees for review /sign off before work start
- ensure modification are make to existing formal hazard assessment or create new one for non-standard or new conditions introduced to the workplace or scope
- ensure new revision of formal hazard assessment resulting from incident RCA are made available to employees
- make sure work do not engage in high-risk task if not formal hazards assessment exists or in place the job

Negative response indicated no evidence of predetermine frequency for hazards assessment revision instead was as per need basis.

SUGGESTIONS FOR IMPROVEMENT

From the review of FieldCore risk management procedure identified the procedure did not contain a specified a pre-determined frequency for review of the task risk assessment (i.e. formal hazards assessment) and the requirement of updating the TRA from outcome of safety inspections. Based on the above findings, auditor recommend the company to conduct a review of their risk management procedure and includes: *i) the requirement for a predetermined frequency or timeline for the task risk assessment revision; and ii) the criteria of updating the task risk assessment when an inspection identifies a new hazard.* Auditor believe doing this will ensure any new /emerging hazards and controls are proactively evaluated, controlled and made known to employees to promote the overall health and safety of the company's workforce.

2.11 Does the employer have a process for conducting site-specific hazard assessments when:		Method	Percentage	Points
a) A new activity has been temporarily introduced at the work site? (5 points)	a	Documentation	100%	5/5
b) Work is conducted at a temporary/mobile work site (whether owned by the employer or not)? (5 points)	b	Documentation	100%	5/5

GUIDELINES

Verified by review of documentation.

A policy and/or process and procedures for conducting site-specific hazard assessments must be in place to award points for this question.

Question “a” cannot be marked not applicable (n/a).

If the employer does not have temporary/mobile work sites, question “b” may be marked not applicable (n/a). Provide justification.

Points are awarded based on 100% positive indicators from documentation.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of FieldCore risk management procedure (FC-GL-EHS-MAN-501) verified the company has a procedure and mandatory requirements for conducting site specific hazards assessments. Positive finding identified section 2.3 of the procedure stated that a site-specific hazard assessment (aka POWRA) must be performed by work party, led by the supervisor or a competent designate using the FieldCore template (FC-GL--EHS-MAN-501-F5) as follows:

Project sites - at the start of each shift, prior to any work activity commencing

Fixed sites - prior to commencing non-standard work

Whenever there us any changes in the local work area conditions

2.11a) A further review of the risk management procedure also highlights that employee are required to routine review and update their site specific hazard assessment (i.e. POWRA) whenever there is any change in local work area conditions for example- employee moving from outdoor task to indoor task, changing from work at height to operation equipment, etc. when changes are made to site specific hazard assessment workers are also required to identified the changes by time stamping on the assessment cards.

2.11 b) Based on auditor review, the company employees frequently perform work at different customer sites on a temporary basis; hence from review of the company risk procedure, section 2.3 stated that site specific hazards assessment must be performed at Customer site locations (i.e. temporary sites) as follows:

i) at start of each works shift;

ii) prior to starting any work activity;

- iii) whenever any changes or temporary conditions are introduced to their work environments.

2.12 Have site-specific hazard assessments been:		Method	Percentage	Points
a) conducted before work begins on the day of the job? (5 points)	a	Documentation	100%	5/5
b) repeated if changes are introduced? (5 points)	b	Documentation	100%	5/5

GUIDELINES

Verified by review of completed site-specific hazard assessments

If site-specific hazard assessments were not required in the previous 12 months, this question as a whole or part may be marked not applicable (n/a). Provide justification. Points are awarded based on 100% positive indicators from documentation.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of the completed site-specific hazard assessments verified that 5 of 5 of the required contents are met. Verification was completed through auditor sampling of 20 total copies of completed site specific hazards assessments. Positive finding identified that

a) 20 of 20 of the sampled site hazard assessments were conducted at the beginning each shift (i.e. 7am day shift; 7pm by night shift). as observed time of completion were marked on all reviewed assessment cards.

b) similarly, from review of the sampled site hazard assessments- evidence confirmed where applicable workers repeats/re-assessed hazards and updated hazards assessment cards. example- at Firebag site on 10/27/2024 POWRA card was updated with: i) a new task: test bleed valves & flame scanner; ii) new hazard i.e. overhead lifts and controls- obey flagging around lift zone, good communication with lift team was added

2.13 Have controls been identified for site specific hazard assessments? (0-5 points)	Method	Percentage	Points
	Documentation	98%	5/5

GUIDELINES

Verified by review of documentation.

Site-specific hazard assessments must identify controls.

Points are awarded based on the percentage of positive indicators.

If site-specific hazard assessments were not required in the last 12 months, this question may be marked not applicable (n/a). Provide justification.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of sample of completed site specific hazard assessment (i.e. point of work risk assessment- POWRA) verified almost hazards were evaluated for controls. From the auditor review it was found 89/92 identified hazards were evaluated with controls.

Negative finding includes a review result where the auditor found in the below site-specific hazards assessment:

- i) POWRA dated 11/20/24- (install of GT forward cans (*slip/trip/fall* hazard was not evaluated for control
- ii) POWRA - (install of TE Generator end shield, - *high noise* hazard was not evaluated for control)

2.14 Do site-specific hazard assessments involve affected employees at the work site? (0-10 points)	Method	Percentage	Points
	Interview	100%	10/10

GUIDELINES

Verified by manager/supervisor and worker interviews.

Interviewees must be able to describe how they participate in the site-specific hazard assessment process.

Points are awarded based on the percentage of positive responses.

If site-specific hazard assessments were not required in the last 12 months, this question may be marked not applicable (n/a). Provide justification.

If the organization does not have supervisors, this question can be asked to only managers.

Provide details/example(s).

FINDINGS / NOTES

From interviews: Response from manager and supervisor interview verified that they have active participation in the site hazard assessment. Positive responses verified how manager and supervisor demonstrated their active involvement as per company and legislative requirements. Example of the positive response identified they are involved as follows:

- at project sites, managers/supervisor routinely review and sign off on workers completed site specific hazards assessment cards i) before start of shift ii) during site walkthrough
- by performing effectiveness check during site walkthrough/ inspection, manager/supervisor regularly sampled workers site hazards assessment cards to ensure all applicable hazards and controls are properly identified for on-going task.
- through communication/ training of workers on the policy/requirement of conducting site hazard assessment before commencing work.

Similarly, positive response from workers identified they always conduct site specific hazards assessments by using the company template or cards; i) at the start of every shift, ii) before beginning any works at sites., and iii) ensures that site hazards assessments are repeated or updated with applicable hazards and control whenever the conditions around their work changes.

2.15 Is there a system in place for workers to report newly identified hazards? (0-10 points)	Method	Percentage	Points
	Interview	100%	10/10

GUIDELINES

Verified by worker interviews.

Workers must be able to describe the system to report hazards, such as unsafe or unhealthy conditions or practices.

Points are awarded based percentage of positive responses.

Provide details/examples.

FINDINGS / NOTES

From interviews: Workers responses verified that the company has established system and workers are consistently following the established system / process for reporting hazards as contained the company communication, consultation an participation procedure (fc-gl-ehs-man-0306).

3 | HAZARD CONTROL

If an identified hazard cannot be eliminated, controls are implemented to reduce the risk of the hazard. Implementation of hazard controls will result in the reduction of incidents. Three methods of control are: Engineering (i.e., elimination, substitution, guards, ventilation, sound barriers, etc.); Administrative (i.e., safe work practices, job procedures, job rotation, training, etc.); Personal Protective Equipment (i.e., eye protection, hearing protection, gloves, fire retardant coveralls, etc.).

3.1 Have controls been identified for the hazards listed in the formal hazard assessments? (0-10 points)	Method	Percentage	Points
	Documentation	84%	8/10

GUIDELINES

Verified by review of formal hazard assessments.

Hazard assessments must include controls for each hazard identified, including engineering, administrative, and PPE controls where applicable. Points are awarded based on the percentage of hazards for which controls have been identified in question 2.3. The **maximum** percentages allowed for this question will be determined by the percentage awarded in question 2.3.

See question 2.3 for an example on calculating score.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of 106 of hazards from the sampled formal hazards assessment identified criteria was met for 106/106. Positive finding identified that applicable engineering, administrative and personal protective equipment controls were included as per the below examples:

Engineering controls: erect scaffold, MWEF, ventilation/LEV systems; lifting aid, OHC, flammable chemical cabinets, extra /temp lightings; LOTO point /personal logs;

Admin Controls:

- Policies - fatigue mgt plan, zero energy verification, fit for duty,
- Procedure: manual handling techniques, PPE matrix, permits, LOTO isolation plan, work instructions/Field procedure
- Practice: housekeeping program, peer check, training/competency, SDS, POWRA, fire extinguisher near hot work, supervisory oversight,

PPE controls: fall arrest systems, safety harness, chemical gloves, cut resistant glove, sealed safety glasses, CSA approve safety boot, FRC coverall,

Negative Finding: identified the maximum percentage allowed for this question is determined by score awarded in 2.3 Average.

SUGGESTIONS FOR IMPROVEMENT

Since not all jobs were identified, auditor could determine if all task, all health and safety hazards were identified and evaluated. when all task are reassessed ensure controls have been considered for all hazards identified. And when all formal hazards

assessment are completed, ensure employees are made aware of all potential hazards and controls applicable to their task to help prevent incident or injury.

3.2 Have the identified engineering controls been implemented? (0-20 points)	Method	Percentage	Points
	Observation	100%	20/20

GUIDELINES

Verified by observation.

Refer to question 3.1 to obtain a sample of engineering controls and verify through observation that they have been implemented.

Auditors must include some controls for highest hazard items in the sample to verify they have been given priority.

Points are awarded based on the percentage of engineering controls sampled from the formal hazard assessment that have been observed.

Provide details/examples.

■ FINDINGS / NOTES

From observations: During site observation all controls highlighted in sampled formal assessment that could be physically observed were verified by the auditor. Positive observation identified all the criteria for 20/20 were met.

Examples: from Office-TRA the below engineering controls were observed: i) functional heating & cooling (HVAC) systems inside facility; ii) temperature monitors system (i.e. functional thermostats) systems are installed; iii) observed working fire protection systems and smoke detectors are installed in the hallway, kitchen and at reception areas.

3.3 Have the identified administrative controls been implemented? (0-20 points)	Method	Percentage	Points
	Documentation	100%	20/20

GUIDELINES

Verified by review of documentation

Refer to question 3.1 obtain a sample of administrative controls to verify through a review of documentation.

Auditors must include some controls for highest hazard items in the sample to verify they have been given priority.

Points are awarded based on the percentage of administrative controls sampled from the formal hazard assessments that have been verified through documentation.

Provide details/example(s).

■ FINDINGS / NOTES

From documentation: A review of sampled FieldCore formal hazards assessment for comparison for administrative control. Positive finding of implemented administrative controls identified from the auditor review included the follow examples:

- Policies - fatigue mgt plan (shift rotation roster), zero energy verification, fit for duty,
- Procedure: manual handling techniques, PPE matrix, safe work permits, LOTO isolation plan, work instructions/field procedure; lift plans in use for lift operation etc.
- Practice: housekeeping program, peer check, training/competency, SDS, POWRA, fire extinguisher available near hot work, supervisory oversight.

3.4 Have the identified personal protective equipment (PPE) controls been implemented? (0-20 points)	Method	Percentage	Points
	Observation	100%	20/20

GUIDELINES

Verified by observation.

Refer to question 3.1 to obtain a sample of controls, and verify through observation that they have been implemented.

Auditors must include some controls for highest hazard items in the sample to verify they have been given priority.

Points are awarded based on the percentage of controls sampled from the formal hazard assessment that have been observed.

Provide details/examples.

FINDINGS / NOTES

From observations: From site tour personal protective equipment controls that are physically visible were over by the auditor, and no deficiency was found. Positive observation from the auditor site observation includes the following examples:

- a) @Firebag Site: CSA approve safety boot, hand gloves, safety sealed glasses and FRC coverall worn by all workers on site; chemical gloves used by crew cleaning the turbine L/H inside Cogen191/194 building; sealed safety glasses,
- b) @Thorold Site: CSA approve safety boot, hand gloves, safety sealed glasses and FRC coverall worn by all workers on site; horizontal lifeline Installed across the GT-1 roof (when cover roof is removed) on East & West sides of the Gas Turbine (GT-1); two sets of SCBA located by SW access door with current inspect date, and readily available for use as when needed

3.5 Are changes to hazard controls communicated to affected employees? (0-5 points)	Method	Percentage	Points
	Interview	100%	5/5

GUIDELINES

Verified by employee interviews.

Interviewees must be able to explain how they were informed of a change to hazard controls relevant to their job tasks. If no changes have been made, interviewees must be aware of how they will be informed of changes.

Points are awarded based on percentage of positive response.

Provide details/examples.

FINDINGS / NOTES

From interviews: Response from employees interview identified they were adequately informed of changes to hazards controls

that are relevant to their work. Positive response included confirmation of some the mode of communication used by management to communicate to employees, examples identified included:

- EHS Alerts/Bulletin/Information Notices
- Pre-job brief /Toolbox talk meetings
- email /electronic communication (Core facts)
- technical information Letter -TIL (safety hazard controls from engineering department)

■ STRENGTHS

FieldCore has implemented well established system called read across (RA) which focus a group on sharing the lessons learned from health and safety event(s) as well as the appropriate corrective and preventative actions implemented. This RA are shared with focus group of employees (e.g. lead technical field advisor or engineer, outage manger) to create broader awareness of the lesson and understand where next potential failure or serious injury may occur. This process allows the company to grow and become stronger together by leveraging team work and collective benefit to employee health and safety

3.6 Are employees using the established hazard controls? (0-15 points)	Method	Percentage	Points
	Interview	100%	5/5
	Observation	100%	10/10

GUIDELINES

Verified by employee interviews and observation.

Interviewees must confirm their use of hazard controls. Observe employees performing their jobs, and verify they are using the established hazard controls identified in the interviews.

Score:

- 0 - 5 points for interviews
- 0 - 10 points for observations

Points are awarded based on the percentage of positive responses and positive indicators from observations.

Provide details/examples.

■ FINDINGS / NOTES

From interviews: Response from employee interview identified that employee is consistently utilizing the adequate hazards controls that are consistent with the hierarchy of control systems. Positive response further identified that employees used combination of elimination, engineering, administrative and personal protective equipment controls. Some of the positive response examples included:

- Use of ergonomic workstation to ensure good ergo practice including observing frequent breaks such as 5min/hr. break when performing office/administrative work.

From observations: finding from auditor site observation tour verified the company employee applies at the minimum a combination of *engineering, administrative and PPE controls* for their work activities onsite. Example of findings:

- Lock out tag out (LOTO) isolation points with locks and tagged found in effect at various locations of the Gas Turbine work scope
- employees personal LOTO locks were affixed to the plant Isolation ground lockbox (lock instated at start of shift and

removed at shift end);

- LOTO permit and register were been used
- employee was all wearing site approved personal protective equipment e.g. staff boots, coverall with reflective strips, hard hat, etc.

3.7 Do managers/supervisors enforce the use of hazard controls? (0-5 points)	Method	Percentage	Points
	Interview	100%	5/5

GUIDELINES

Verified by managers/supervisor and worker interviews.

Managers/supervisors must be able to give examples of how they enforce the use of controls. Workers must be able to describe the enforcement process.

If the organization does not have supervisors, this question can be asked to only managers.

Points are awarded based on the percentage of positive responses.

Provide details/examples.

■ FINDINGS / NOTES

From interviews: Response from manager and supervisor interview identified they understood their responsibility to enforce the use of controls by the workers under their supervision. Positive response identified includes some examples on how they identified controls are enforced as per below:

- Training /Competency: maintaining regular employee training assessment/ training review; deploying only qualified employee to work assignment;
- Visible leadership /supervisory oversight: through regular worksite /walkthrough and inspection, conducting intervention and effective check during work execution including coaching and mentoring, task specific audit e.g. LOTO process audit;
- Worker empowerment e.g. empowering and enforcing Stop Work Authority

Similarly, response from workers interview identified that supervisors are consistently enforced the use of established controls as required. Positive response from workers also included confirmation of some the examples stated in the supervisor response above.

3.8 Is there a process in place for preventative maintenance of equipment, vehicles, facilities, and tools? (5 points)	Method	Percentage	Points
	Documentation	100%	5/5

GUIDELINES

Verified by review of policy and/or process documents.

Documentation must include a policy and/or process requiring ongoing preventative maintenance for all vehicles, equipment, facilities, and tools. (e.g.: overhead doors, cranes, localized ventilation, forklifts, power tools, etc.). There must be maintenance schedules where applicable.

Points are awarded based on 100% positive indicators from documentation.

Provide details/example(s).

FINDINGS / NOTES

From documentation: Review of the FieldCore procedures (fc-gl-ehs-saf-0702, fc-gl-saf-0709, fc-gl-ehs-saf-0708, fc-gl-ehs-saf-0701-1-g1) identified that the company has written process/policies stipulating requirement /directives for preventative maintenance for all equipment and machineries applicable to its operations. Positive review findings included the following examples as contained in the applicable procedures:

i) Machinery Safety: sections 2.5.4 of procedure stated the minimum preventative maintenance requirements as follows:

a) Legal / Statutory inspections (e.g., annual, triennial, etc.)

b) different types of maintenance activity to be completed on machines with their corresponding frequency (or conditions to be fulfilled for requesting maintenance before a failure occurs). These must include:

- Periodic checks of machine conditions (such as hydraulic system conditions, potential mechanical fatigue)
- Checks of primary and secondary safeguarding
- Check of emergency shut-down systems (with records kept in the maintenance log book or equivalent)
- A failsafe test of machine safeguarding (except for radars) *every 6 months, as a minimum*
- Planning of corrective works when deficiencies are detected
- Records of the maintenance work

ii) Motor Vehicles - section vehicle custodians must ensure that regularly scheduled maintenance, in accordance with manufactures recommendations is completed, and records of vehicle maintenance must be maintained with the vehicle.

iii) Crane and lifting Equipment: FieldCore requirement is for lifting equipment procedures specified frequent / regularly preventative maintenance service activities - to be at least every 12 months; 6 months if the lifting equipment is for lifting people. These frequencies and may be more regular, if specified by the Competent Person.

3.9 Is the preventative maintenance process in use? (0-5 points)	Method	Percentage	Points
	Documentation	100%	5/5

GUIDELINES

Verified by review of documentation.

Documentation must confirm that preventative maintenance is being performed according to the applicable schedules as identified in question 3.8.

Points are awarded based on the percentage of positive indicators.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review finding verified that scheduled and regular preventative maintenance are been performed for all company equipment, vehicles, tools and machinery as required in the applicable procedures. Positive findings identified scheduled required preventative maintenance and servicing of applicable equipment and machinery applicable or utilized in FieldCore operations are been maintained as stipulated in the applicable procedures: Further positive findings identified that FieldCore Tool Center utilizes a Compliance Calendar (i.e. Gensuite tool- online) record for tracking of required scheduled and

regulatory preventative maintenance of company equipment and machinery as required. Example of the verification findings included:

- Vehicles: based on review of sampled evidence of service records of fleets vehicles verified the required schedule preventative maintenance servicing (i.e. oil change, filter replacement, etc.) were completed, scheduled and coordinated by Fleet Element at designated dealership e.g. regular oil change performed every 10,000km driven
- Cranes and Lifting & Rigging accessories: evidence from sampled reviews of 3 sampled maintenance /servicing records identified 3/3/ required annual maintenance examination and servicing were performed for the overhead crane, chain hoists, slings (wired, webbings) at the required timeline (i.e. 12months)
- Machinery: from sampled review of recently completed forklift annual PM reports identified 2/2 verified the required maintenance services were completed. the records also shown the warehouse forklifts' PM services were performed by a competent person (external vendor) as required.

3.10 Is there a system that ensures defective equipment, vehicles, facilities, and tools are taken out of service? (0-10 points)	Method	Percentage	Points
	Interview	100%	10/10

GUIDELINES

Verified by worker interviews.

Worker interviews must be able to describe when and how defective equipment, vehicles, facilities, and tools are removed from service or for repair. (e.g., tag out, lock out, energy isolation, etc.).

Points are awarded based on the percentage of positive responses.

Provide details/example(s).

■ FINDINGS / NOTES

From interviews: Employees interview identified that employees are fully understood the company procedure and process for removal for defective equipment and tools from service. Positive response identified the procedure /process required employees to immediately tagged and removed defective tool from service to prevent adverted being used by another worker or causing injury to anyone.

3.11 Does the Violence Prevention Plan meet legislated requirements? (5 points)	Method	Percentage	Points
	Documentation	100%	5/5

GUIDELINES

Verified by review of documentation

Documentation must confirm the employer's Violence Prevention Plan meets legislated requirements (Alberta) or Federal legislation for federally regulated employers.

Points are awarded based on 100% positive indicators

Provide details/example(s).

■ FINDINGS / NOTES

From documentation: Review of FieldCore violence free workplace policy and procedure identified that the required Alberta OH&S legislative 12/2 criteria are met. Positive finding identified the company policy and procedures included the below:

- committed to providing a safe workplace for all employees, customers, suppliers, vendors, and visitors.
- committed to have ZERO tolerance for acts of violence and threats of violence. Without exception, acts and threats of violence are not permitted.
- commitments to establishing an effective process for identifying, preventing and handling threats or violence in the workplace;
- committed to creating awareness of actions that can reduce the likelihood of threats that escalate into violent behavior;
- committed to creating accountability and responsibility for violent actions.
- the obligation and procedure for employee to report workplace violence
- processes and procedure for creating awareness and reporting workplace violence.
- protect employees against retaliatory action for reporting or opposing workplace violence or taking part investigation of violation
- promptly investigate all reported cases of workplace violence and take corrective action
- ensures employee's right to fill violence governmental authorities or take legal action
- protect the confidentiality of employee(s) who report any violence or threats of violence to the extent consistent with appropriate investigation into the matter and protection of employees, customers, contractors, suppliers and visitor
- process involved for disclosure information in relation to related to: i) violence incidents investigation findings and ii) addressing corrective actions (such as minimum personal info of witnesses/employee reporting violence)
- process for informing employee and other affiliates (contractor, client, visitors, etc.) of any acts or suspected treat of violence
- promptly investigate all reported cases of workplace violence and take corrective action
- confirming employee's right to fill violence governmental authorities or take legal actions

3.12 Does the Harassment Prevention Plan meet legislated requirements? (5 points)	Method	Percentage	Points
	Documentation	100%	5/5

GUIDELINES

Verified by review of documentation

Documentation must confirm the employer's Harassment Prevention Plan meets legislated requirements (Alberta) or Federal legislation for federally regulated employers.

Points are awarded based on 100% positive indicators

Provide details/example(s).

FINDINGS / NOTES

From documentation: Review of FieldCore Harassment -Free workplace policy identified the required Alberta OH&S legislative 7/7 criteria are met. Positive finding identified the policy stated the company's commitments and procedures:

- providing a safe, fair, and harassment free work environment (for employee, contractor, client, visitors, etc.)
- prohibits discrimination or harassment against anyone based on race, color, religion, national or ethnic origin,
- commitment to protect employees against retaliatory action for reporting or opposing harassment or taking part investigation of violation;
- zero tolerance for any form of harassment, discrimination, or bullying. does not allow retaliation against anyone for:

i) raising a good faith concern under the policy,

ii) opposing this type of conduct in the workplace,

iii) participating in any investigation (by FieldCore or by a government agency) of this type of conduct, or iv) asserting their rights under the policy.

- commitment to protect employees in accordance with human rights policy, and providing prompt assistance in any case/ threats of workplace harassment.
- the procedures to follow for employees to report workplace harassment (e.g. reporting to manager, HR, etc.)
- the process /procedure for conducting investigation on incidents of workplace harassment
- The procedures/process for documenting cases of harassment incident, conducting promptly investigation all reported cases of harassment and take resolving corrective action(s).
- steps and procedure for maintaining including sharing of information's related to reported workplace harassment incidents and result of investigations

3.13 Have the Violence and Harassment plans been reviewed as per legislated requirements? (5 points)	Method	Percentage	Points
	Documentation	0%	0/5

GUIDELINES

Verified by review of documentation

The violence and harassment plans must be reviewed as per legislated requirements (Alberta) or Federal legislation for federally regulated employers.

Points are awarded based on 100% positive indicators

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of FieldCore current version of violence and harassment policies identified the criteria was not met. Negative finding identified the last revision of the violence policy was in 2017 and that of harassment policy was in 2020, this means both policies last were last revision is more than 3years ago contrary to AB OH&S legislative requirement.

SUGGESTIONS FOR IMPROVEMENT

Audit review identified the latest revision of the harassment policy 2020ver and the violence policy last revision was 2017, which are more than 3yrs as required per AB OHS legislation requirements. Consequently, the auditor recommends for the company to revise both policies at least every 3yrs. Doing this ensures the company consistently meets the Provincial OH&S legislative requirement as well as enhances the overall continued improvement of the company program

4 | JOINT HEALTH AND SAFETY COMMITTEES (HSC) AND HEALTH AND SAFETY REPRESENTATIVES (HS REPRESENTATIVES)

Joint Health and Safety Committees are a key element of the internal responsibility system. It brings work site parties together to work on topics such as hazard identification and control, investigation of health and safety incidents, and responding to reports of dangerous work. If an employer (5-19) chooses to go above legislation and establish a HSC instead of designating a HS representative, they have the option to answer committee questions thus marking the HS representative question not applicable (N/A).

If the employer has 1-4 employees as determined through the audit scope, this element may be marked not applicable (N/A).

4.1 Do the terms of reference for the HSC include all legislated requirements? (5 points)	Method	Percentage	Points
	Documentation	0%	0/5

GUIDELINES

Verified by review of documentation.

Documentation must confirm a terms of reference is in place for the HSC and includes all legislated requirements (Alberta) or Federal legislation for federally regulated employers.

Points are awarded based on 100% indicators from documentation.

If the employer is only required to have a HS representative(s), this question may be marked not applicable (n/a). Provide justification.

Provide details/example(s).

FINDINGS / NOTES

From documentation: Auditor review identified that the company has no terms of reference.

SUGGESTIONS FOR IMPROVEMENT

Audit review identified that FieldCore not written terms of reference in place for health and safety committee or representative. Auditor recommend for the company to immediately institute a written terms of reference for a health and safety committee since the company is currently regularly employed more than 20 employees in the Province of Alberta. Doing will not only ensure the company meets the Alberta OH&S requirements but also enhances continued workers cooperation, consultation and participation in FieldCore's company's health and safety management system improvement.

4.2 Is the HSC established as per legislated requirements? (5 points)	Method	Percentage	Points
	Documentation	0%	0/5

GUIDELINES

Verified by review of documentation

Review terms of reference and other committee documentation to determine there is an established HSC as per legislation (Alberta) or Federal legislation for federally regulated employers.

Points are awarded based on 100% indicators from documentation.

If the employer is only required to have a HS representative(s), this question may be marked not applicable (n/a). Provide justification.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of FieldCore health and safety programs identified the company do not have a term of reference currently in place. Further review identified the company have not established a health and safety committee or representative as required

SUGGESTIONS FOR IMPROVEMENT

Audit review identified that FieldCore have not established a joint health and safety commitment or representative. From audit review, it has been identified that FieldCore regularly employs more than 20 employees for work in Alberta. Consequently, it's the auditor recommendation that FieldCore immediately establish a joint health and committee consisting of a minimum 2 workers and 2 managers as required by Alberta OH&S Legislation (part 2 of AB OHS Act).

4.3 Has a HS representative been designated as per legislated requirements? (0-5 points)	Method	Percentage	Points
	N/A		

GUIDELINES

Verified by employee interviews.

An employer needs to designate a HS representative as per legislated requirements (Alberta) or Federal legislation for federally regulated employers. Employees need to be informed if this process has occurred.

Points are awarded based on percentage of positive responses.

If the employer is only required to have an HSC, this question may be marked not applicable (n/a).

Provide details/example(s).

FINDINGS / NOTES

From interviews: Not applicable. The auditor did not ask this question because the since the company is required to have joint health and safety committee because its employee number is more than twenty (20) regularly employed.

4.4 Have duties been written for the HSC and/or HS representative(s)? (5 points)	Method	Percentage	Points
	Documentation	0%	0/5

GUIDELINES

Verified by review of documentation.

Documentation must confirm that duties of the HSC and/or HS representative(s) have been written as per legislated requirements (Alberta) or Federal legislation for federally regulated employers.

Points are awarded based on 100% positive indicators from documentation

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of FieldCore's health and safety programs identified there is no written HSC duties because the company do not currently have a established a joint health and safety committee as required by the legislation.

SUGGESTIONS FOR IMPROVEMENT

Audit finding identified the Company have no written HSC duties as it does not currently have a functional health and safety committee. Auditor recommend that to promptly set up a joint workers health and safety committee and have a written duties in place for the committee as required by Alberta OH&S legislation. Auditor also recommend for this to be establish before the next auditor to promote the continued strength of the company internal responsibility system and overall health and safety management improvement.

4.5 Have the HSC members and/or the HS representative(s) been trained in their duties and responsibilities? (0-10 points)	Method	Percentage	Points
	Documentation	0%	0/10

GUIDELINES

Verified by review of documentation.

Review training records for committee members and/or the HS Representative(s) to ensure they are trained as per legislated requirements (Alberta) or to Federal legislation for federally regulated employers.

Points are awarded based on percentage of positive indicators.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of FieldCore's health and safety programs identified no HSC member training record is available. Negative finding confirmed the company do not currently have a functional health and safety committee and as such no HSC member has been completed as required by OH&S legislation.

SUGGESTIONS FOR IMPROVEMENT

Audit identified the company do not currently have any health and safety committee member training record available as required. Auditor recommend that as soon as the company institute a joint health and safety committee and the members are known, to schedule training for the members as specified in part 13 of Alberta OH&S code. Doing this ensure the continue improvement of the company occupational health and safety management system.

4.6 Do the HSC members and/or HS representative(s) understand their duties and responsibilities? (0-10 points)	Method	Percentage	Points
	Interview	0%	0/10

GUIDELINES

Verified by HSC and/or HS representative(s) interviews

Interviewees must be able to describe their general duties and responsibilities.

Examples may include: participation in hazard identification, investigations, and inspections, development and promotion of hazard controls, handling health and safety concerns.

Points are awarded based on percentage of positive responses.

Provide details/examples.

FINDINGS / NOTES

From interviews: Auditor could not complete the required HSC member interview because the company do not have a functional health and safety committee.

SUGGESTIONS FOR IMPROVEMENT

Audit finding identified the company do not currently have health and safety committee members appointed. Therefore, its the auditor recommendation that the company schedule training for the HSC members as specified in part 13 of Alberta OH&S code as soon as the company institute its joint health and safety committee and the members are know. Doing this ensure the continue improvement of the company occupational health and safety management system.

4.7 Do HSC members and/or the HS representative(s) participate in health and safety activities? (0-10 points)	Method	Percentage	Points
	Interview	0%	0/10

GUIDELINES

Verified by employee interviews.

Interviewees must be able to confirm the committee members and/or representative(s) are involved in health and safety activities.

Points are awarded based on the percentage of positive responses.

Provide details/examples.

FINDINGS / NOTES

From interviews: Auditor could not conduct the required interviews because the company do not have any designated HSC commitment members. Further finding identified no required HSC member activities are taking place since the company do not have a health and safety committee.

SUGGESTIONS FOR IMPROVEMENT

Audit has identified no HSC members' activities are happening in the company as required because there is no active health and safety committee. Hence, auditor recommends the company to establish a term of reference and institute a joint health and safety committee, and ensure the term of reference clearly specify the requirement for the HSC involvements in health and safety activities. The auditor further recommends that the company to complete this action before the next audit to ensure the continuous improvement of its HSMS

4.8 Is there a policy or procedure in place for the HSC and/or HS representative(s) to address employee concerns related to the health and safety system? (5 points)	Method	Percentage	Points
	Documentation	0%	0/5

GUIDELINES

Verified by review of documentation.

There must be a policy or procedure in place for the receipt, consideration, and disposition of concerns and complaints regarding the health and safety of workers.

Points are awarded based on 100% positive indicators from documentation.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review identified the company do not have a designated health and safety committee hence they do not have a written procedure or policy for addressing workers concern and complaints as required.

SUGGESTIONS FOR IMPROVEMENT

Audit has identified the company has not established a health and safety committee as required. Therefore, its the auditor recommend that company to establish a term of reference and institute a joint health and safety committee, to also ensure the term of reference/procedure to include a clear requirement for the HSC members for handling employees' health and safety concerns. Auditor further suggest the company to complete this action before the next audit in 2025 to ensure the continuous improvement of its HSMS

4.9 How do employees bring forward health and safety concerns and complaints? (0-10 points)	Method	Percentage	Points
	Interview	0%	0/10

GUIDELINES

Verified by employee interviews.

Employees must be able to explain how they bring forward health and safety concerns and complaints to the HSC and/or HS representative(s) as per the process from 4.8.

Points are awarded based on the percentage of positive responses.

Provide details/example(s).

FINDINGS / NOTES

From interviews: Auditor could not conduct the required interview because the company do not have an active health and safety committee.

SUGGESTIONS FOR IMPROVEMENT

This audit has identified the company has not established a health and safety committee as required. Consequently, the auditor recommends that company to establish a term of reference that includes a include a clear guideline for the HSC members to handle employees' health and safety concerns and complaints. Auditor further suggest the company to complete this action before the next audit to ensure the continuous growth of the company health and safety management systems.

4.10 Is a process in place for the HSC and/or HS representative(s) to make health and safety recommendations to management? (0-10 points)	Method	Percentage	Points
	Interview	0%	0/10

GUIDELINES

Verified by manager/supervisor interviews

Interviewees must be able to explain how they receive recommendations from the HSC and/or HS representative(s) regarding the health and safety of employees.

If the organization does not have supervisors, this question can be asked to only managers.

Points are awarded based on the percentage of positive responses.

Provide details/examples.

FINDINGS / NOTES

From interviews: The auditor could not conduct the required interviews because the company do not currently have an active health and safety committee.

SUGGESTIONS FOR IMPROVEMENT

Audit has identified the company has not established a health and safety committee as required. Therefore, its the auditor recommendation for the company to establish a term of reference and institute a joint health and safety committee, and ensure the term of reference clearly specify the requirement or procedure for HSC members to addressing or making recommendation to management. Doing this will enhances workers continued involvement and participation in the company health and safety management and improvement process.

4.11 Are health and safety concerns/complaints received by the HSC/HS Representative resolved in a timely manner? (0-5 points)	Method	Percentage	Points
	Documentation	0%	0/5

GUIDELINES

Verified by review of documentation.

Consider the complexity of the concerns/complaints to determine timeliness.

Points are awarded based on percentage of positive indicators.

This question may be marked “n/a” if there were no concerns/complaints in the previous 12 months. Provide justification.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review identified no available record of the employees' health and safety complaints/concerns was available. Negative finding identified the company do not have a functional health and safety committee, and as such no employee's health and safety concerns/complaints involving HSC members are not taking place.

SUGGESTIONS FOR IMPROVEMENT

Audit finding identified there were no record of employee's health and safety concern/complaints were due to not existence of the required health and safety committee. Therefore, the auditor recommends the company to immediately establish a term of reference to establish joint health and safety committee. Also, the company to institute a term of reference and ensure it contain the process including timeline for handling employee complaints. A prompt completion of this action will not only ensure the company meets its AB OH&S legislative obligations, but also enhances the continued improvement the company overall occupation health and safety management systems

4.12 Does the HSC hold meetings as identified in the terms of reference? (0-5 points)	Method	Percentage	Points
	Documentation	0%	0/5

GUIDELINES

Verified by review of documentation.

Review committee meeting minutes to confirm the meeting frequency is being met as per the HSC Terms of Reference.

Points are awarded based on percentage of positive indicators from documentation.

If the employer is only required to have a HS Representative(s), this question may be marked not applicable (n/a). Provide justification.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of FieldCore health and safety programs and documentations identified there are no record of

HSC meeting minutes is available as required. Negative finding included no meeting is taking place as required because the company do not have a functional health and safety committee.

SUGGESTIONS FOR IMPROVEMENT

This audit identified no record was found for HSC meeting taking place because the FieldCore is yet to establish an active health and safety committee as required. Consequently, its is the auditor recommendation for the company to immediately institute a term of reference for a joint health and safety committee and to ensure the term of reference clearly specify the requirement for a frequent meeting of the committee members as per Alberta OH&S legislation. This will enhance workers continued involvement and participation in the company health and safety management and improvement process.

4.13 Does the Joint Health and Safety Committee/HS representative review the employers work site inspection documentation? (0-5 points)	Method	Percentage	Points
	Documentation	0%	0/5

GUIDELINES

Verified by documentation.

Review any meeting minutes, inspection records or other documentation that can verify that the HSC/HS representative have reviewed inspection documentation.

Points are awarded based on percentage of positive indicators.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of the company health and safety programs and documentations identified no record of HSC members involvement/review of inspection was available as required. Negative finding identified there were no record of HSC involvement in the workplace inspection because the company do not have an active health and safety committee.

SUGGESTIONS FOR IMPROVEMENT

This audit identified no record of HSC involvement or review of inspection is available due to FieldCore lack of an active health and safety committee as required. Consequently, its is the auditor recommendation for the company to immediately institute a term of reference for a joint health and safety committee and to ensure the term of reference clearly specify the requirement for a frequent workplace inspection involvement for the committee members as per Alberta OH&S legislation. This will enhance workers continued involvement and participation in the company health and safety management and improvement process.

4.14 Are the names and contact information of the HSC members and/or the HS representative(s) readily available? (0-5 points)	Method	Percentage	Points
	Observation	0%	0/5

GUIDELINES

Verified by observation.

The names and the contact information for the HSC members and/or the HS representative(s) must be readily available at each represented work site.

Points are awarded based on the percentage of work sites that have contact readily available.

Provide details/examples.

■ FINDINGS / NOTES

Verified by observation: Based on auditor observation no HSC contact information was found during the observation tours of the company locations. Negative finding identified no HSC members contact information are available due to the company's lack of active health and safety committee.

■ SUGGESTIONS FOR IMPROVEMENT

This audit identified no record of HSC member contact information was available because FieldCore does not have a functional joint health and safety committee as required. Therefore, its the auditor recommendation for the company to promptly establish a term of reference, institute a joint health and safety committee. And importantly to ensure the names and contact information of the HSC members are made known to all the company employees, including posting at the company workplace e.g. at the notice board, intranets, etc.). Doing this will not only create adequate employees' awareness but enhances continuous growth and continued improvement of the company overall health and safety management systems

5 | QUALIFICATIONS, ORIENTATION AND TRAINING

Qualifications, orientations and training are essential to ensure employees perform their job tasks in a safe and healthy manner. An employer is responsible to ensure the employee is competent.

5.1 Is there a process to ensure employees are qualified for the position for which they are being considered? (0-15 points)	Method	Percentage	Points
	Documentation	100%	5/5
	Interview	100%	10/10

GUIDELINES

Verified by review of documentation and manager/supervisor interviews.

A process must exist that requires a check for qualifications required for the job/tasks (e.g., degrees, diplomas, certificates, trade certificates, apprenticeship program, diplomas, driver's licenses, etc.).

Points are awarded based on 100% positive indicators from documentation.

Managers/supervisors must be able to describe the process used to verify that employees have the qualifications required to do the job for which they are being hired.

Score:

- 5 points for documentation
- 0 - 10 points for interviews

If the organization does not have supervisors, this question can be asked to only managers.

Documentation points are awarded based on 100% positive indicators. Interview points are awarded based percentage of positive responses.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of FieldCore new hire and talent acquisition procedure identified the company have an established programs for hiring and putting qualified/competent employee to work. Positive finding included identified the below as some of the processes used by the company:

- Talent & acquisition process (job description & qualification - used to support all positions posting at career site i.e. Jobvite)
- Talent Referral Program.

From interviews: Manager/Supervisor interview identified that they fully understood the process involved for hiring qualified employee. Positive response included the manager/supervisors involvement in the various programs/processes.

5.2 Does the orientation process cover OHS rights, and critical health and safety information? (5 points)	Method	Percentage	Points
	Documentation	60%	0/5

GUIDELINES

Verified by review of orientation documentation.

The OHS rights, and critical health and safety information must be reviewed with the employee. These must, at minimum include:

- Right to know
- Right to participate
- Right to refuse dangerous work
- Emergency response procedures
- Rules of enforcement
- High risk hazards
- Hazard reporting
- Incident reporting
- Violence and Harassment

Points are awarded based on 100% positive indicators from documentation.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of the company Orientation programs identified 6/9 content requirement are met. Positive finding identified the orientation program contain the below requirements:

- Right to refuse dangerous work
- Emergency response procedures
- Rules of enforcement
- High risk hazards
- Hazard reporting
- Incident reporting

Negative finding identified the program did not contain the following requirements:

- Violence and Harassment
- Right to know
- Right to participate

SUGGESTIONS FOR IMPROVEMENT

Audit finding identified that FieldCore employee Orientation contents doesn't include or discuss the following requirement, i) harassment & violence, ii) right to participate and iii) right to know. Auditor recommend the company update the orientation to include this contentment, doing this will ensure employees are not only properly informed of their OH&S legislative rights and obligation but also to help prevent incident and injury

5.3 Do managers/supervisors ensure orientations were conducted prior to employees starting regular duties? (0-10 points)	Method	Percentage	Points
	Interview	100%	10/10

GUIDELINES

Verified by manager/supervisor and worker interviews.

Managers/supervisors and workers must be able to describe the process used to ensure workers have received orientation prior to employees starting regular duties.

If the organization does not have supervisors, this question can be asked to only managers.

Points are awarded based percentage of positive responses.

Provide details/example(s).

FINDINGS / NOTES

From interviews: response from manager/supervisor interview identified that they are understood the orientation requirement and process they used to ensure employee are consistently oriented before starting work assignment. Positive response identified that before resume work at customer site they are assigned the customer site specific orientation in either using ISN, Customer eLearning portal in addition to FieldCore EHS orientation. All orientation record will be tracked my employee manager and Safety department through use of training matrix.

From interviews: worker interview responses confirmed they consistently receives orientation before starting work. Positive responses identified that depending on the employee categories orientation are provide at different level:

- Staff employee orientation - are provided to all staff employee starting from first day of hiring/resumption up to 6 months (depending on the job position/ classification) including health & safety courses (e.g. fire extinguisher awareness, defensive driving, confined space advanced, etc.) in the employee SuccessFactors eLearning portal.
- Field employee and crafts - are given inhouse safety orientation () and customer site specific orientation prior to starting work at Customer sites. completed orientation records are maintained with the project specific Safety plan.

Interview sampling: Thorold Cogen [8/8], Firebag [6/6], Edmonton Office [6/6]

5.4 Are managers/supervisors provided with training to support them in their role? (0-15 points)	Method	Percentage	Points
	Documentation	93%	5/5
	Interview	100%	10/10

GUIDELINES

Verified by review of training documents and manager/supervisor interviews.

Managers/supervisors must be provided training specific to their role (e.g., incident investigation, hazard identification, communications, conducting meetings, supervisory techniques, enforcement and discipline, legislation, etc.).

Score:

- 0-5 for documentation
- 0-10 for interviews

To confirm which training is deemed appropriate to their role, refer to employer’s defined roles and responsibilities in question 1.5, job descriptions, job competencies, etc. Link this back to training documents and interviews.

If the organization does not have supervisors, this question can be asked to only managers.

Documentation points are awarded based on percentage of positive indicators. Interview points are awarded based on percentage of positive responses.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of the FieldCore training procedure in conjunction with the the inhouse leadership training programs identified that the company have established program to ensure their manager and supervisors are adequately trained to support their roles. Positive finding identified in addition to job specific training, the company inhouse leadership program (Module 1- 4) is given to managers, supervisor and team leads and with a refresher training provided every 3yrs. The training program is a 2hrs for each modules, instructor led training and the below contents:

- module 1: Leadership
- module 2: Human Error Prevention
- module 3: Risk Management
- module 4: Coaching and Mentoring

Negative finding from review of available training records identified, 1 out of 15 manager/supervisor/lead teams has not completed the leadership training, as per the following: **Documentation sampling:** Edmonton Office [5 / 5], Firebag [5 / 5], Thorold Cogen [4 / 5]

From interviews: Response from manager/supervisor interview confirmed that they have received adequate training to support their roles. Positive response indicated that all interviewees have received all the relevant role specific training including health and safety trainings as follows as per sampled Interview sampling: Thorold Cogen [2/2], Firebag [3/3], Edmonton Office [2/2]. Examples of training includes:

- EHSQ Leadership Training Programs -module 1-4 (FieldCore inhouse leadership program)
- Leadership for Safety Excellence
- Service Manager training programs including role specific certification and programs/platform e.g. PMP, ServiceMax, Field Vision, etc.
- Field Engineer Program (FEP)
- Annual EHS Core Curriculum

5.5 Does job-specific training include hazards and controls as well as a practical demonstration? (0-10 points)	Method	Percentage	Points
	Documentation	93%	9/10

GUIDELINES

Verified by review of training documents

Employees must be trained in the hazards and controls associated with their job which includes a practical demonstration by the trainee to ensure they have acquired the necessary knowledge or skill related to the subject matter.

Due to the nature of some tasks, practical demonstrations might not be suitable.

Examples of training documents may include a combination of reviewing policies, procedures, practical demonstrations, safe work practices, hazard assessments and training certificates/manuals (e.g., WHMIS 2015, Confined Space Entry, TDG, tasks specialized to the employer, using specialized tools and equipment, etc.).

Documentation points are awarded based on percentage of positive indicators.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of the employee completed/valid training records in conjunction with the company health & safety Core training curriculum, identified training given to employees include hazards and controls including practical demonstrations where applicable. Positive finding identified from review of the below sampled training records and contents:

- 5 employees training records - Fall Protection certificate, Crane operator certificate, CSE
- 10 employees - LOTO hand on training (inhouse program)

Negative finding is from auditor review of training record at one of the audit site and found 1 out 5 sampled employee LOTO hand on training was expired few day earlier.

5.6 Do employees receive job specific training when they are assigned new tasks, or when an operational change affects their work? (0-10 points)	Method	Percentage	Points
	Interview	100%	10/10

GUIDELINES

Verified by employee interviews.

Confirm employees receive training when they are re-assigned to a new task or when there are changes to the operations that affects the work they do.

Points are awarded based on percentage of positive responses.

Provide details/example(s).

FINDINGS / NOTES

From interviews: Response from employee interview confirmed that they are consistently given job specific training before assign to their role and during job transfer. Positive response identified that before employee transfer to another role they are assign training related to the new role which can include in class training and on the job training (OJT) for specified period., and upon completion of the OJT they will be evaluated by the experienced employee under whom they completed the OJT, only after certified 'competent' will the employee be deployed/transfer to the new role.

Negative response were from few employee who did not properly answer the question asked and instead provided responses / example related to the site orientation they received prior to starting work.

■ STRENGTHS

It was identified that FieldCore has implemented a robust and ongoing employee technical and hands on training programs that incorporate a combination of months of in class, field and on the job, training concepts in relation to the employee specific profession area. This effort does not only boost employee professional skills and confidence, but promote overall health and safety as their are less prone to error.

5.7 Is there a process to assess competency of new and re-assigned workers? (0-10 points)	Method	Percentage	Points
	Documentation	100%	10/10

GUIDELINES

Verified by reviewing documentation.

Verify that the employer has a process on how they determine the competency of their workers (e.g., on the job training, task observation, test, etc.), and the intervals of when they are completed. Reassignment can include a new job, task, or when a worker moves to a new location. Operational changes may require new competency assessments to be completed.

Points are awarded based percentage of positive indicators.

Provide details/example(s).

■ FINDINGS / NOTES

From documentation: A review of FieldCore competency program/process identified the company consistently ensure employee are adequately competent before assignment to work duties. Positive finding identified the company utilizes a dedicated competency platform (i.e. Kahuna) to record, evaluate, re-assess and track employee professional, skill level records.

5.8 Are competency assessments conducted? (0-5 points)	Method	Percentage	Points
	Interview	86%	4/5

GUIDELINES

Verified by manager/supervisor interviews.

Managers and supervisors must be able to indicate how they ensure competency assessments are conducted as required by the process in 5.7.

If 5.7 is awarded no points, this question is scored 0. Points are awarded based on percentage of positive responses.

If the organization does not have supervisors, this question can be asked to only managers.

Provide details/example(s).

■ FINDINGS / NOTES

From interviews: Response from manager and supervisor interview confirmed that employee competency are consistently been assessed as required. Positive response identified that the company competency system is used to conduct and track employee competency records. Example of responses stated that: Kahuna system is the single source of training and skill

tracker, and managers/supervisors use Kahuna to conduct assessment and track employees' competency.

Negative response includes from manager/supervisor who identified either they do not have any direct reports or direct responsibility of assigning training to employees.

5.9 Is required refresher training provided? (0-10 points)	Method	Percentage	Points
	Documentation	100%	10/10

GUIDELINES

Verified by reviewing documentation.

An organization is required to determine set timelines/intervals in their policies for in-house refresher training. Some certifications (e.g., First Aid, trade certificates, etc.) also have requirements for re-training/refresher training on a set schedule or when operational changes require it. Employers must document any refresher training requirements, and ensure schedules are met.

Points are awarded based on the percentage of positive indicators.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of FieldCore employee core curriculum [FC-GL-EHS-MAN-0304-G1] in conjunction with completed training matrix/records identified re-fresher trainings are occurring as required. Example of courses and timeline of some courses requiring applicable to FieldCore operation are as follows:

- Confined Space Entry authorized (GE-EHS-262)> refresher= biennial
- Asbestos Awareness (GE-EHS-160)>refresher = annual
- Fall Protection Advanced (GE-EHS-320)>refresher= biennial
- Occupational noise for exposed worker (GE-EHS-530)>refresher= annual
- Compressed Gas Safety (GE-EHS-180) >refresher = Triennial
- Lock out tag out authorized (GE-EHS-CEP-34)> refresher = Biennial
- Hazardous Waste Awareness (GE-EHS-Awareness)
- EHS Overview for Field Services (GE-EHS-262)>refresher = annual
- Defensive driving (GE-EHS-237)>refresher = annual

For verification auditor sampled 10 employees' records for two courses requiring annual refresher [i) EHS overview and ii) Defensive Driving] and the finding indicated 10/10 employees' courses were refreshed and current as required (i.e. until 2025).

6 | OTHER PARTIES AT OR IN THE VICINITY OF THE WORK SITE

Other employers, visitors, and external work site parties must be included in the employer's health and safety management system.

6.1 Is a process in place to address the protection of others not under the employer's direction? (5 points)	Method	Percentage	Points
	Documentation	100%	5/5

GUIDELINES

Verified by review of documentation.

The process must take into account the protection of other workers not under the employer's direction, visitors and other persons in the vicinity of work that is being carried out.

Points are awarded based on 100% positive indicators from documentation.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of FieldCore communication, consultation and participation procedure (FC-GL-EHS-MAN-0306) identified, the company ensures the health and safety of other employee and external parties are protected from the potential outcomes of its operational impact. Auditor review of the procedure identified covers the processes for the protection of others parties including visitors that are not under company control:

Example: section 2.3 of FC-GL-EHS-MAN-0306 procedure highlights the minimum requirements for communication of any ongoing hazardous activities taking place in the FieldCore premises/facilities, safety rules and procedures that must be follow by visitors as:

- Emergency muster points(s)
- Fire Safety/fire alarm testing
- Welfare facilities
- hazards highlighted in the facility task risk assessment (TRA)
- Any applicable PPE requirements
- Security Requirements.

6.2 Is a process in place that includes criteria for evaluating and selecting other employers? (5 points)	Method	Percentage	Points
	Documentation	100%	5/5

GUIDELINES

Verified by review of documentation.

An employer must identify what requirements they use to evaluate and select other employers in order to allow them to conduct work at the employer's work site.

Points are awarded based on 100% positive indicators from documentation.

If the auditor can confirm the audited employer does not use other employers, this question may be marked not applicable (n/a). Provide justification.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of FieldCore contractor management procedure identified the company used an established / dedicated systems for prequalifying and engaging contractors who are required to work for the company. From the review of the procedure, it contains the criteria and steps involved for prequalification and re-qualification of contractors and vendors.

Example of some of the prequalification steps/criteria identified includes:

- Classify - classification based on work scope (Work Type) and risk level (Hazard Risk Category- contractor risk matrix)
- Collect- collection of data using the ComplyWork online questionnaire- supported contractor documentations
- Analyze- analysis of contractor data against approval criteria
- Decide - score generated from the prequalification process (i.e. approved, required mitigation, not approved)
- Document- - all document provided and generated for prequal process uploaded to ComplyWork in support analysis and approval decision

6.3 Is a process in place that includes a system for regularly monitoring and addressing non-compliance with other employers? (0-10 points)	Method	Percentage	Points
	Documentation	100%	5/5
	Interview	100%	5/5

GUIDELINES

Verified by review of documentation and manager/supervisor interviews.

A process to regularly monitor health and safety performance and correct identified deficiencies is in place for other employers during the period of the contracted services.

The contracting employer must have a process to deal with other employers when there is non-compliance to their OHSMS.

Score:

- 5 for documentation
- 0-5 for interviews

Points are awarded based on 100% positive indicators from documentation. Interview points are based on percentage of positive responses.

If the auditor can confirm the audited employer does not use other employers, this question may be marked not applicable (n/a). Provide justification.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of the FieldCore contractor management procedure identified the company have established

processes for monitoring the health and safety performance of its contractor. Further reviews identified some of the processes the company utilize to monitors health & safety performance, identifies and addresses deficiencies under the company's directions to includes:

Contractor Pre- Mobilization, includes:

- prior to mobilization, FieldCore request the contractor to make task or site specific documentations (including safe work plan, risk assessments, records of equipment inspection, proof of competencies including training certificates, licenses, worker compensation, etc.) available for FieldCore review.
- FieldCore operations ensures that adequate and sufficient documentations are received from contractors to ensure effective work planning and risk mitigation

Mobilization and coordination of Site Activities includes:

- defined level of supervision of contract companies by FieldCore in proportionate to the the risk associated the work
- FieldCore operation team ensures contractors/ contractors employees understand they are required to participates in all site mobilization and on-site coordination activities including site specific orientation, pre-job briefing and tool box talks
- Each contractor/contractor employees required to signs off on the FieldCore health & safety expectations/requirements
- FieldCore provide company site specific orientation to contractors and provide Contractor health & Safety rules for review and acknowledgement.
- During Execution, FieldCore site management develop and implement regular inspection schedule to confirm requirements are understood and implemented by contactors.

Violations includes:

- FieldCore monitors the health and safety performance relative to the approval criteria. This includes inspections of the contractors' activities, a process to handle the violation/ deficiencies and regular performance review.
- repeated health and safety non-compliances and findings are actioned as with any other contractual default, up to and including removal of contactors from work site.

From interviews: Responses from manager/supervisor interviewees confirmed they actively monitors contractors compliance to health and safety performance and addresses non-compliance included:

- ensuring contractors are involved and participates in the required site health and safety activities including pre-job briefs, toolbox talks, weekly safety meetings, performing site specific hazards assessments, etc.
- provide supervision oversight on contractors risk mitigation application including use of applicable formal task risk assessments for their scope
- conducting periodic inspection and audits of contractors ongoing work activities to verify compliance with contractual and FieldCore EHS requirements
- when deficiency or non-compliance are found during audit of contractors work activities, FieldCore manager/supervisors immediately address them by either stopping the work or intervening with contractors/contractor employees to correct the deficiencies.
- if violation or non-compliance of company health and safety policies including life saving rules are found, this will be immediately address by corrective actions including use of disciplinary measures up to and including immediate removal of the contractors from sites pending completion of investigation.

6.4 Are health and safety orientations provided to:		Method	Percentage	Points
a) Visitors? (5 points)	a	Documentation	100%	5/5
b) Other employers? (5 points)	b	Documentation	100%	5/5

GUIDELINES

Verified by review of documentation.

Confirm orientations are provided to other employers, and visitors (e.g., visitor logs with safety information identified, contractor sign off, etc.)

Points are awarded based on 100% positive indicators from documentation.

If the auditor can confirm the audited employer does not use other employers, part b of this question may be marked not applicable (n/a).

Provide details/example(s).

FINDINGS / NOTES

From documentation: From review of sample orientations documentation completed from various company project in the past 12month, identified orientations are been completed for everyone including contractors and visitors. Positives finding from review from sampled past and recent orientation attendance records identified, orientation are organized and provided for contractors and visitors involved in company operations at various applicable locations. Example of sample review result as per below:

- **Documentation sampling:** 6.4a: Firebag [5 / 5]. 6.4b: Edmonton Office [5 / 5], Firebag [5 / 5], Thorold Cogen [5 / 5]

6.5 Does the employer communicate with external work site parties regarding:		Method	Percentage	Points
a) Their health and safety responsibilities while on site? (0-5 points)	a	Interview	100%	5/5
b) Work site hazards and controls? (0-5 points)	b	Interview	100%	5/5
c) When there are changes to the site? (0-5 points)	c	Interview	100%	5/5

GUIDELINES

Verified by interviewing managers/supervisors.

Interviewees must be able to describe the process in use and provide details/examples of how external work site parties are made aware of their health and safety responsibilities (including reporting incidents, investigating incidents, and reporting unsafe conditions), work site hazards and controls, and any changes that may affect their health and safety.

Work site parties can include other employers, suppliers, prime contractors, etc. conducting activities at a work site or receiving products.

If the organization does not have supervisors, this question can be asked to only managers.

Points are awarded based on the percentage of positive responses.

Provide details/examples.

FINDINGS / NOTES

From interviews: Response from manager/supervisor interviews identified they understood the various different systems and processes used to communicate with other work parties including contractors and customers.

Positive response identified that the company established processes for flow of information outside FieldCore that include some of the following:

- Contractual communication of information external parties e.g. Customers, concerning health & safety events, incident/failure etc. to be delivered either by Service Manager/Outage Manager as applicable
- All health & safety communication with regulator authorities must be documented
- Health and Safety incidents/events must be communicated in accordance with the EHS Incident management procedure

b) Positive responses identified for communicating at worksite hazards and control included:

- Permitting issuance and coordination: used for safe work permit (e.g. hot work, LOTO permit, etc.) to ensure hazardous/uncontrolled energy to ensure related hazard and control are adequate communicated to all affected parties.
- Coordination meetings/ Shift change debrief: used by site parties for discussion of upcoming tasks/scope and associated risks (e.g.: heavy lift such as turbine rotor lift, simultaneous operations, etc.)

c) Positive responses identified include the below processes used for communicating worksite changes included:

- Coordination meetings/ Shift change debrief: used by site parties for discussion of upcoming tasks/scope and associated risks (e.g.: heavy lift such as turbine rotor lift, simultaneous operations, etc.)
- Site walkthrough: e.g. LOTO isolation change walkdown with contractor supervisor, customer reps, etc.

■ STRENGTHS

It was identified FieldCore has implemented a consistent process and system for planning their project executions at Customer site well in advance usually as far as 18months in advance. these strategies ensure all parties including customers, contractors and all relevant affected parties including health and safety teams are involved in good time to provide adequate timeline for conduction proactive activities like project risk assessment and implement remedial actions prior to the execution teams go to site. This effort ultimately enhances the health and safety of all employees.

6.6 Is health and safety information readily available to affected external work site parties? (0-5 points)	Method	Percentage	Points
	Interview	100%	5/5

GUIDELINES

Verified by manager/supervisor interviews.

Health and safety information is readily available to affected external work site parties.

Examples may include hazard assessments, inspections, emergency response procedures, safe work practices/procedures, investigations, HSC and/or HS representative meeting minutes.

Work site parties can include other employers, suppliers, prime contractors, etc. conducting activities at a work site or receiving products.

If the organization does not have supervisors, this question can be asked to only managers.

Points are awarded based on the percentage of positive responses.

Provide details/example(s).

■ FINDINGS / NOTES

From interviews: Response from manager/supervisor interviews identified they understood their responsibilities to ensure consistently make health and safety information available to other employers health and safety of everyone under FieldCore direction. Positive response identified the use of following medium as:

- Toolbox talks, safety meetings
- Review and share of EHS Alert reviews/ bulletin
- Posting of company EHS posters (e.g. FieldCore 9 Life Saving Rule, Stop Work Authority posters, etc.) at visible location around the workplace

7 | INSPECTIONS

The formal inspection process can proactively identify new potential hazards, as well as confirm effectiveness of controls already in place.

7.1 Is there an inspection process that states the frequency of inspections and includes the following:		Method	Percentage	Points
	a	Documentation	100%	5/5
	b	Documentation	100%	5/5

GUIDELINES

Verified by review of inspection process.

- The frequency is established by the employer based on the level of risk. Different inspection frequencies for different areas may be established. For example, a shop may require more inspections than the administrative office. Inspection processes must include the frequency of inspections for each area.
- Participation by all levels (m/s/w) is not expected for every inspection, but each applicable level should be assigned some responsibility in the inspection process in order to award points for all parts of this question.

Points are awarded based on percentage positive indicators from documentation.

Provide details/example(s).

FINDINGS / NOTES

From documentation: Review of FieldCore inspection procedure and programs identified the company met all the required contents including different types of inspections and templates with the pre-determined frequencies.

Positive findings from review of the inspection procedure identified the following examples as the stipulated frequencies for inspections of different company operations/location as:

a) i) Regional Office:

- GPI -6monthly (<10 employees); Annual (>10 employees)

ii) Project Sites:

- General planned Inspection (GPI) -: Weekly
- Senior Managers Visits (SMV) inspection -: 1/quarter
- Hazard Hunts (HH) -: weekly

b) Further review of the company procedure also identified the participation of all level of employee including managers, supervisors and workers in the inspection programs. Example of inspection required for different employee levels are stated as :

- General planned Inspection (GPI) - required to be performed by weekly by supervisor and workers
- Senior Managers Visits (SMV) inspection - required to be performed by senior manager and managers

- Hazard Hunts (HH) - required to be performed supervisor and workers

7.2 Are checklists or forms used for formal inspections? (5 points)	Method	Percentage	Points
	Documentation	100%	5/5

GUIDELINES

Verified by review of completed inspection checklists or forms.

An inspection checklist or form customized to the scope of the inspection must be in place and in use. Checklists may be work site, department, operation-specific, employee observation, etc.

Points are awarded based on 100% positive indicators from documentation.

Provide details/example(s).

FINDINGS / NOTES

From documentation: The review of samples of inspections reports verified that there are inspection forms and templates designed for the company various specific operations, locations, and work activities. Positive reviews verified through auditor review identified the below inspection checklist were been used for the company past and ongoing operations and as shown in the below sample results.:

- Field General Plan Inspection (FC-GL-EHS-MAN-0301-F2(Tab Z)
- Hazard Hunts- FC-GL-EHS-MAN-0301-G1-
- Senior Manager Visit (SMV) FC-GL-EHS-MAN-0101-F1(via Gensuite inspection tool)
- EHS Project & Services Plan compliance -FC-GL-EHS-MAN-0301-F1 (via Gensuite inspection tool)
- Putting People to Work Safely Checklist
- Housekeeping inspection checklist
- Dropped object prevention checklist (FC-GL-EHS-SAF-0714-F2)
- ITH Inspection Checklist (Tab X2)

Documentation sampling: Edmonton Office [5 / 5], Firebag [5 / 5], Thorold Cogen [5 / 5]

STRENGTHS

It was identified FieldCore through its robust inspection programs has implemented multiple inspection format and tools that are specific and targeted towards its high-risk operations, notable among many is the *putting people to work safely audit (aka P2W)*. P2W utilizes the plan do check act strategy in real time to audit the 10 steps the company uses to put its employees to work. This effort not only promote the effectiveness of the inspection process but also the strength of the safety management systems.

7.3 Have individuals leading formal inspections received training? (0-10 points)	Method	Percentage	Points
	Documentation	90%	9/10

GUIDELINES

Verified by review of inspection and training records.

Identify employees leading inspections and verify they have completed training.

Points are awarded based on percentage positive indicators from documentation.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of the sampled completed training records of employees identified those required to complete or lead inspections are adequately trained. Auditor review was verified through the review of training record of the employees who are required lead/participate in the different inspections at the various audited sites: **Documentation sampling:** Edmonton Office [9 / 10], Firebag site[10 / 10], Thorold Cogen site [8 / 10]

Negative finding identified that from the sampled employees, (a) @Edmonton Office 9 of 10 (b) @Throld site 8 out of 9, have current trainings and the other needed refresher.

7.4 Are formal inspections carried out in accordance with the policy and/or process:		Method	Percentage	Points
	a	Documentation	100%	5/5
	b	Documentation	87%	4/5
	c	Documentation	93%	5/5
	d	Documentation	73%	4/5

GUIDELINES

Verified by review of inspection records.

a. The frequency in the policy and/or process is being met for all areas of the operation.

b-d. Records must show participation from each level stated in the policy and/or process is being met (question 7.1).

If 7.1 is awarded no points, this question is scored 0. If the employer does not have managers or supervisors, one of these levels can be marked as n/a.

Points are awarded based on percentage positive indicators from documentation.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of completed inspection samples was conducted by the auditor to verify the following requirements. Positive finding identified that a) frequency of inspection of all areas of the company operations ((e.g. fixed facilities/Office, Field/customer sites, etc.) was met as verified by the documentation sampling results: Edmonton Office [5 / 5], Firebag [5 / 5], Thorold Cogen [5 / 5].

b-d) further result of review verified requirement of all level of employees (.i.e. managers, supervisors and workers) completing inspections were met as per below documents sampling results:

- b: Edmonton Office [5 / 5], Firebag [4 / 5], Thorold Cogen [4 / 5];
- c: Edmonton Office [2 / 2], Firebag [5 / 5], Thorold Cogen [4 / 5].
- d: Edmonton Office [5 / 5], Firebag [3 / 5], Thorold Cogen [3 / 5]

Negative finding was identified in relation to m/s/w not completing shown that 13/15 of managers;11/12 supervisor and 11/15 workers were completing inspection.

SUGGESTIONS FOR IMPROVEMENT

Audit finding from documentation review identified the large number of workers are not consistently completing/participation in inspection as required. Therefore, its auditor recommendation that create action plan to promote higher worker participation such as using of the various workers engagement forum re-enforcing expectation. Doing this will not only aid promote more workers involvement engine in the inspection process but will also drives greater awareness of workplace safety and overall continued improvement of the company health and safety programs

7.5 Do management inspections include a component of employee observation? (0-5 points)	Method	Percentage	Points
	Interview	100%	5/5

GUIDELINES

Verified by senior manager/manager interviews.

Senior managers/managers must be able to describe how they include observations of OHS behaviors and conditions during their inspections.

Points are awarded based on the percentage of positive responses.

Provide details/examples.

FINDINGS / NOTES

From interviews: Response from senior manager/manager interview identified their inspection includes observing the ways and manner the workers are performing their assigned tasks. Further response verified the managers inspection activities includes verification of workers behavior during execution through assessing their safe use of work practices, risk assessment and tooling/equipment to confirm workers are not putting themselves and other at risks as result of performing assigned task. When non-compliance are found intervention measure are performed such as by stopping the work to intervene or correct the unsafe action. Example of response heard included during site /work observation interviewees verifies that workers are utilizing required legislated and company health and safety controls, to mitigates risk and prevent injury e.g. use of pre-job hazard assessment, safe tool use, proper PPE use etc.

7.6 Is there a system to correct deficiencies identified through formal inspections? (0-5 points)	Method	Percentage	Points
	Interview	100%	5/5

GUIDELINES

Verified by manager/supervisor interviews.

Interviewees must be able to describe how they ensure deficiencies identified through formal inspections will be corrected.

If the organization does not have supervisors, this question can be asked to only managers.

Points are awarded based on the percentage of positive responses.

Provide details/examples.

FINDINGS / NOTES

From interviews: Response from manager/supervisor interview identified that they consistently ensure any deficiency found from inspections are effectively resolved to prevent it from resulting to incident or injury to their workers. Interview response indicated that manager/supervisor actively engaged the responsible parties including customers worker to ensure defective are effective resolved. Some of the stated examples deficiency resolutions method includes:

- On the spot intervention; e.g. deficiency found during site visit inspection will either fix immediately with site team,
- Use of Action Tracking System (Gensuite ATS tool): for escalation and tracking open health & safety concerns, inspection findings, etc.
- NCR tool: used for tracking quality related deficiencies till closure

7.7 Have deficiencies identified through formal inspections been corrected? (0-25 points)	Method	Percentage	Points
	Observation	100%	25/25

GUIDELINES

Verified by observations.

Observe whether sampled deficiencies identified in the inspection reports have been corrected.

Points are awarded based on the percentage of positive indicators from observations. Where no deficiencies are identified or not observable, this question may be marked not applicable (n/a). Provide justification.

Provide details/examples.

FINDINGS / NOTES

From observations: During the site observation tours two inspection deficiencies that could be physical observe were verified. As verified by the observation was able to verify that the two (2) were corrected. Example of the positive observations included the following:

- i) eye shield/ side glass were installed/replaced on the bench grinder situated inside the bolt world tent.
- ii) grounding cable has been installed on the flammable cabinet.

8 | EMERGENCY RESPONSE

An emergency response plan helps ensure appropriate and efficient actions will take place in the event of an emergency or disaster.

8.1 Have written emergency response plans been developed for potential emergencies? (0-10 points)	Method	Percentage	Points
	Documentation	100%	10/10

GUIDELINES

Verified by review of emergency response plans applicable to the operations.

Emergency response plans should be specific to the employer including those required by legislation (Alberta) or federal legislation for federally regulated employers. Examples of potential emergencies to consider could include:

- Fire
- Severe weather
- Medical emergencies
- Hazardous materials release
- Violence
- Suspicious persons
- And other situations appropriate for the nature of the work being performed

Provide details/examples of emergencies identified.

Points are awarded based on the percentage of positive indicators.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of the FieldCore emergency preparedness plan (FC-GL-EHS-MAN-0401) verified the plan identified all the potential emergencies related to the company's operations. Positive review finding included the below as potential emergencies that are applicable to the company operations:

- Severe Weather (e.g. lighting, heat wave, wildfire, flood, snowstorm, tornadoes, high wind, etc.)
- Fire, Explosion and Earthquake
- Medical
- Hazardous Materials /Chemical Incident Release
- Natural Disasters
- Utility Failure
- Lone working
- Work at height
- Confined spaces
- Lock Out Tag Out

8.2 Do written emergency response plans include:		Method	Percentage	Points
a) Communication systems? (2 points)	a	Documentation	100%	2/2
b) Emergency phone numbers? (2 points)	b	Documentation	100%	2/2
c) List of emergency response personnel? (2 points)	c	Documentation	100%	2/2
d) Appropriate response? (2 points)	d	Documentation	100%	2/2
e) Monitoring the effectiveness of the plan? (2 points)	e	Documentation	100%	2/2

GUIDELINES

Verified by review of emergency response plans and/or procedures.

- Communication systems include alarms, procedures for contacting both internal and external emergency contacts, etc.
- Emergency phone numbers must include more than “9-1-1.”
- A list of persons designated to respond to specific types of emergencies.
- Appropriate employee response procedures must be written for all potential emergencies that require them (e.g., Evacuation, lockdown, muster point, shelter in place, equipment, etc.).
- A requirement to monitor the effectiveness of the plan through drills and actual responses.

Notes must include examples of auditor findings to support the scores for each part of the question.

Points are awarded based on 100% positive indicators from documentation for each sub-point.

Provide details/examples.

FINDINGS / NOTES

From documentation: From review of FieldCore emergency preparedness procedure and site emergency response plans identified 5 /5 criteria was meet. Auditor reviews identified the procedures /plan meet the requirement for the company different operational location including at customer sites, including:

- a) communication systems were identified in all 3 samples e.g. i) use of radio and telephones (on site/internal), telephone call (external), ii) use of air horn for site evacuation alarm, etc.
- b) reviewed plans identified emergency phone numbers- as 911 for contacting external EMS/fire service, and onsite designated radio channel# or phone (e.g. at Suncor site- phone # 866-633-0845), radio is used to comminate all clear to onsite personnel in the event of evacuation onsite.
- c) for all review emergency plan - list of emergency contact personnel and or center are specified
- d) the procedure and site response plan (sample) identified type of emergency(e.g. fire /explosion, hazardous gas release) that required employees to muster and respective designated muster points,
- e) section 2.6.1 of the procedure (FC-GL-EHS-MAN-0401) stated that the effectiveness of the procedure will be evaluated by performing periodical scheduled emergency drills exercises either through a full scale, tabletop/desk top, virtual (at least annually)

STRENGTHS

FieldCore has implement a strong emergency preparedness response program including security alert systems that ensure all employees traveling or working at any location in the country or globe proactively notified through mobile or email of impending disaster warning including extreme weather, environmental, security or public disturbance related to their location. This system ultimately promotes the health and safety of employees in respective of their location but also enhance the continued improvement of the company health and safety management systems.

8.3 Have employees received emergency response training appropriate to their individual responsibility? (0-10 points)	Method	Percentage	Points
	Interview	70%	7/10

GUIDELINES

Verified by employee interviews.

Interviewees must be able to describe the type of training they received in emergency response. Examples include first aid, fire warden, in house, industry specific, incident command system, etc.

Points are awarded based on the percentage of positive responses.

Provide details/example(s).

FINDINGS / NOTES

From interviews: Response from employee interviews identified many employee have been trained in emergency response required to safely performed their assignment. Positive response identified every employee have received some level of emergency response related training needed for their assignment including inhouse and Customer site specific emergency responses courses. Example of the inhouse courses received by all employees includes:

- *annual portable fire extinguishers training (GE-EHS-545)*
- *travel, health and safety and security awareness (GE-EHS-645)*
- *emergency preparedness and fire prevention (GE-EHS-290) -including element of alarm system, evacuation routes, fire prevention, muster points & environmental protection*
- *extreme temperature awareness (GE-EHS-315)*

Negative response identified more than half of the employees interviewed ether had expired *first aid training* or has never been trained in first aid.

SUGGESTIONS FOR IMPROVEMENT

Audit finding identified that majority of the company employee are not trained in first aid as part of emergency response training received. Auditor recommend that the company consider training many of their employees (e.g. manager/supervisor/team leads) in first aid training to ensure there are adequate and competency first aider available to cover its operational needs to ensure the safety of employee at all time.

8.4 Do employees understand their responsibilities under the emergency response plan? (0-10 points)	Method	Percentage	Points
	Interview	100%	10/10

GUIDELINES

Verified by employee interviews

Interviewees must be able to describe how they would respond in the event of an emergency.

Points are awarded based on the percentage of positive responses.

Provide details/example(s).

FINDINGS / NOTES

From interviews: Response from employee interview identified they clearly understood their roles under the emergency response plan/process. Positive response identified employees responsibilities includes to :

- *be familiar with the site's emergency response plan*
- *comply with instructions from authorized emergency response responder in the event of emergency*
- *ensure adequate arrangement for emergency resources to deal with emergency situations*
- *ensure emergency equipment are inspected, tested, and completed in a timely manner*
- *to assume the role first emergency responder or assign to the role to a more qualified person*

8.5 Are emergency response drills conducted? (0-10 points)	Method	Percentage	Points
	Documentation	63%	6/10

GUIDELINES

Verified by review of records.

Records of drills must be kept. Drills are required at least once every 12 months applicable to the operations. If records cannot be found from the past 12 months, points cannot be awarded.

An emergency response drill could include a practice drill or tabletop exercise. (e.g., evacuation, lockdown, shelter in place, etc.).

A drill type may cover multiple emergency response plans. For example, an evacuation drill might address multiple scenarios including a fire, hazardous material release, bomb threat, etc.

Actual emergency responses cannot be used as a drill for scoring this question.

Points are awarded based on the percentage of positive indicators.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of the emergency response plan identified 3/4 criteria are met. Further findings identified the plan include the requirement for;

- the emergency response procedure be periodically evaluated, at least annually through either: i) tabletop/desk top review; ii) Virtual simulations; iii) full scale
- all drills or exercise must be documented
- must ensure the drill and exercises performed adequately address all potential emergency situations identified in the ERP

Based on sampled review of the available completed drills, identified 1 of 3 sites have conducted ERP drill as required.

Negative finding identified including no record of drills completed for Edmonton office and one of the customer site in the last twelve months.

SUGGESTIONS FOR IMPROVEMENT

Audit review did not find any record of emergency response drill conducted for Edmonton office for the past 12 months. Auditor recommend the company to consider performing drill exercise for the Edmonton office to meet the requirement of the plan and ensure employee are fully informed on the potential emergency scenario related to that facility

8.6 Have deficiencies in the emergency response plan identified through a drill been corrected? (0-5 points)	Method	Percentage	Points
	Documentation	0%	0/5

GUIDELINES

Verified by review of documentation.

Review drill records, meeting minutes, etc. for documented deficiencies. Confirm any corrective action(s) were completed.

Notes must contain examples of the findings from records of drills, and how deficiencies were corrected.

Points are awarded based on percentage of positive indicators.

This question may be marked not applicable (n/a) only if deficiencies were not identified from drills. Provide justification.

If points have not been awarded in question 8.5, then 0 points must be awarded for this question.

Provide details/examples.

FINDINGS / NOTES

From documentation: A review of the completed /available emergency response drill identified that no deficiencies were identified. Positive find however also highlighted the following positive remarks as: all employees arrived at muster location within the required time frame ; the evacuation alarm was loud enough to alert everyone including those working inside confined space. Further review also identified the below as the noted deficiencies as:

- Long distance of muster point to work location creating long footprint covered by operator/workers
- AED need to be available in MCC locations
- location of SCBA from pad location increases the time for response

Negative finding from review of the mock drill completed at one of the company operational site did not contain information on how the any of the identified deficiencies (above) were corrected.

SUGGESTIONS FOR IMPROVEMENT

Auditor review of available/ sample mock drill report from a customer site didn't not include complete information of how all the identified deficiencies were closed. Auditor recommend the company to ensure information from a customer ERP drill including the deficiency closure are made available to its employee are fully familiar with the customer site emergency

8.7 Have deficiencies in the emergency response plan identified through an actual emergency response been corrected? (0-5 points)	Method	Percentage	Points
	N/A		

GUIDELINES

Verified by review of emergency response documentation.

Notes must contain examples of how identified issues were corrected.

Points are awarded based on percentage of positive indicators.

If an actual emergency response has not occurred, or deficiencies were not noted in the past 12-month period, the question may be marked not applicable (n/a). Provide justification.

Provide details/examples.

FINDINGS / NOTES

From documentation: A review of emergency response drill identified this question has been identity as not applicable. Because auditor review did not find information that include actual emergency record for the past 12months, hence no applicable deficiencies as required.

8.8 Do the numbers of employees trained in first aid meet legislated requirements? (5 points)	Method	Percentage	Points
	Documentation	100%	5/5

GUIDELINES

Verified by review of documentation.

Refer to legislation (Alberta) or federal legislation if federally regulated employers, and review first aid certificates. To award points, the auditor must verify that legislated first aid requirements have been met across all shifts.

Points are awarded based on 100% positive indicators from documentation.

Provide details/example(s).

FINDINGS / NOTES

From documentation: From review of employee training records, verified the legislative requirements are met. Positive finding identified based on the company operation the number of first training meet the required criteria.

*Example of finding from training record reviewed are as per the number of sampled employee as per -documentation sampling:
Edmonton Office [3 / 5], Firebag site [5/ 5],Thorold Cogen site[5/5]*

8.9 Do first aid equipment, supplies and facilities meet legislated requirements? (10 points)	Method	Percentage	Points
	Observation	83%	0/10

GUIDELINES

Verified by observation.

Equipment, supplies and facilities must meet the identified legislative requirements (Alberta) or Federal legislation for federally regulated employers

The auditor must verify that legislated first aid obligations have been met at all visited sites and facilities.

Points are awarded based on 100% positive indicators from observations.

Provide details/example(s).

■ FINDINGS / NOTES

From observations: from the site observation tour the first aid kit requirement that can be physically verified were observed. Observation finding identified 2/3 criteria was met.

Negative finding was found at one of the company project location where no first aid kit was supplied/available at the company trailer.

■ SUGGESTIONS FOR IMPROVEMENT

During audit observation tour first aid kit requirement was met at 2 out of the 3 sites. Auditor recommend the company need to ensure a first kit are readily available in all its operational location including customer to ensure first aid arrangement are readily available in the event of injury onsite, and as per provincial OH&S legislative requirement.

9 | INCIDENT INVESTIGATION

Investigations determine the cause(s) of an incident, and the corrective action(s) required to prevent recurrence.

9.1 Is there a process that requires the reporting of incidents (including near miss), occupational illness, and work refusals? (5 points)	Method	Percentage	Points
	Documentation	100%	5/5

GUIDELINES

Verified by review of documentation.

A process must require the reporting of incidents (including near miss), occupational illness, and work refusals to award full points. These must include both internal and external reporting (e.g., OHS, WCB, etc.).

Points are awarded based on 100% positive indicators from documentation.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of FieldCore incident management procedure identified criteria was met. Positive finding identified the following requirements:

- *the following incidents must be reported and classified within stipulated timeline; i.e. all accidents (level A, B, C.D), Near Miss including PSE, Occupational illness, and Safety concern (including work refusal)*
- *table 1 & 2 of the incident procedure - highlights the internal and external (e.g. OH&S, WCB, OSHA) 'communication requirement and timeline*

STRENGTHS

It was identified FieldCore has implemented the process that make it mandatory that complete investigation using systematic method must be completed for all health and safety incidents in respective of the severity. This ensure every learning opportunity are explored and lesson learned are leveraged toward the overall health and safety of employee and enhancement of the OHSM

9.2 Can employees explain the reporting procedures for incidents (including near miss), occupational illness, and work refusals? (0-10 points)	Method	Percentage	Points
	Interview	100%	10/10

GUIDELINES

Verified by employee interviews.

Interviewees must be able to explain the process for reporting incidents (including near miss), occupational illness, and work refusals.

Points are awarded based on the percentage of positive responses.

Provide details/example(s).

FINDINGS / NOTES

From interviews: Employee interview responses identified employee adequately understood the initial and follow up reporting procedures for all category of incidents as required. Positive responses heard included employees will report incidents through various medium including verbal and electronic notification (e.g. phone call email) to direct manager and or safety manager within the specified timelines (e.g. with 2hrs for initial notification) depending on the incident severity. Example of other responses included:

- as soon as incident occurs to immediately reports all health & safety incidents (including near misses, occupational illness and work refusals) to their direct supervisor/senior site representative, site safety advisor or FieldCore contact.
- follow up reporting by submitting incidents, near misses, and work refusal using FieldCore system of record (e.g. Gensuite tool)
- at projects site employee document all incidents including near miss, occupational illness, injury using FieldCore incident reporting template and submit to safety manager or direct manager for review

9.3 Are employees reporting incidents, occupational illnesses and work refusals? (5 points)	Method	Percentage	Points
	Documentation	100%	5/5

GUIDELINES

Verified by review of documentation.

Review completed incident, occupational illness, and work refusal reports that support reporting is taking place.

Points are awarded based on 100% positive indicators from documentation.

This question may be marked not applicable (n/a) if there were no incidents in the previous 12 months. Provide justification.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of sample of incident reports identified occupational illness and or work refusals are been reported by employees as required. Verification conducted through review of 3 reports submitted within 12month confirmed employees were reporting incidents including occupation illness, injury and work refusal events. Further positive finding identified majority of the reviewed incidents and work refusals reports were initiated by workers. Example of reports included the below:

- Neck strain/ sprain
- Finger laceration while cleaning turbine parts
- Work refusal (stop work) - due to incomplete LOTO isolation.

9.4 Are employees reporting near misses? (5 points)	Method	Percentage	Points
	Documentation	100%	5/5

GUIDELINES

Verified by review of documentation.

Review completed near miss reports to support that reporting is taking place.

Points are awarded based on 100% positive indicators from documentation.

If the employer is considered low hazard AND did not have a near miss in the previous 12 months, this question may be marked not applicable (n/a). Provide justification.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of completed near misses reports identified near misses are been reported as required. Verification was conducted through review of sample two recent near miss reports submitted within the past 6months of 2024, and both events were reported few hours of occurrence.. Example of recently reported near misses included:

- Dropped hydraulic ram cylinder (Near Miss)
- Fallen broken ceiling ties inside site office trailer (Near Miss)

Further review identified that the near miss reports were analyzed for cause factors and corrective actions were documented using the company designated form (Tab DD) and FieldCore system of records i.e. Incident tool (Gensuite).

9.5 Is there a procedure for investigating incidents (including near miss), occupational illness, and work refusals? (5 points)	Method	Percentage	Points
	Documentation	100%	5/5

GUIDELINES

Verified by review of documentation.

The procedure must include:

- how to investigate incidents (near misses), occupational illness, work refusals
- how to identify root causes
- the requirement to implement corrective actions

Points are awarded based on 100% positive indicators from documentation.

Provide details/example(s).

FINDINGS / NOTES

From documentation: From review of FieldCore incident management procedure and programs identified the 3/3 criteria are met. Example of finding identified that;

- FieldCore deployed TapRoot and or 5-Why RCA methodologies to i) investigate all level A, B, C & D incidents ii) identify root causes (RCA), iii) derived at corrective actions
- Near Miss - including PSE(potential server event) investigation are also completed using either TapRoot (high severity) or 5-

Why (low severity)

9.6 Have the individuals leading investigations been trained in investigation techniques? (0-5 points)	Method	Percentage	Points
	Documentation	100%	5/5

GUIDELINES

Verified by review of completed investigation records and training records.

Review training records of individuals who have completed investigation reports and confirm they have received training.

Points are awarded based on the percentage of positive indicators. If third party investigators are brought in, full points may be awarded, but documented evidence of this must exist.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of FieldCore current training records in conjunction with the the RACI matrix associated with the procedure identified employee responsible for leading investigation have been trained as required. Verification was conducted through sample review of certificate of employees assigned to lead investigation and identified the following investigation specific trainings completed included:

- TapRoot Root Cause Analysis
- Basic Investigation Techniques
- FieldCore in-house -Incident Analysis (GE-EHS-110); Injury & Illness Recordkeeping (GE-EHS-CEP-19)

9.7 Do managers/supervisors participate in investigations? (0-10 points)	Method	Percentage	Points
	Interview	100%	10/10

GUIDELINES

Verified by manager/supervisor interviews.

Not all managers/supervisors need to actively participate in incident investigation. However, all must be able to describe managers/supervisors are involved in the investigation process.

If the organization does not have supervisors, this question can be asked to only managers.

Points are awarded based on the percentage of positive responses.

Provide details/example(s).

FINDINGS / NOTES

From interviews: Responses from Manager/supervisor interviews identified they understood their responsibilities as required under the FieldCore incident management procedure. Example provided included participation including as point of contact for the location of incident; ensure all incident are reported and investigated in a timely manner; involve in regular reviews of incident at relevant worksite; in the vent of PSE or serious incident visit the site as soon as possible; ensure prompt remedial of

actions are taken to make site safe; support with assigning investigation corrective actions, etc.

9.8 Do workers participate in the investigation process? (0-10 points)	Method	Percentage	Points
	Interview	100%	10/10

GUIDELINES

Verified by worker interviews.

Not all workers need to actively participate in the incident investigation process. However, all workers must be able to describe how workers participate in the investigation process.

Note: Participation must be more than the injured worker or witness.

Points are awarded based on the percentage of positive responses.

Provide details/example(s).

■ FINDINGS / NOTES

From interviews: Response from worker interview identified workers are been involved in investigation process. Example of positive responses identified the ways how they are involved to include:

- providing accurate and complete information to the investigator(s) during the evidence gathering stage e.g. incident timeline, documentation, witness statement, etc.
- as subject matter expert (SME) based on their knowledge of the affected work-scope, work procedure, etc.
- working with site leadership and investigator to determine the root causes of incident.
- support with determining the appropriate corrective actions.

9.9 Do investigations: a) Identify underlying factors? (0-5 points) b) Recommend corrective actions? (0-5 points)	Method	Percentage	Points
	a Documentation	100%	5/5
	b Documentation	100%	5/5

GUIDELINES

Verified by reviewing completed investigation reports.

- Investigations must identify the underlying factors (root causes) resulting from deficiencies in the health and safety system.
- Corrective actions must be designed to implement system changes that will prevent reoccurrence. (e.g., Advising employees to “be more careful” is not an acceptable corrective action.)

Points are awarded based on the percentage of reviewed investigation reports that identify causes and recommend corrective action.

If there have been no investigations required in the previous 12 months, refer to blank investigation forms or the investigation process.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of sample investigation reports from 12months of records identified 2/2 criteria are met. Based on verification conducted through sampling of investigations report at the different sites, verified the investigation methodologies been used required that:

a) Root causes were identified. example included:

- Improper maintenance / inadequate housekeeping
- Contributing causes: failure to utilize fire blankets; inadequate hazard assessment (i.e. potential ignition sources not identified)

b) SMART Corrective actions were assigned - example included:

- Layout fire blanket on the ground below welding location;
- A fully charged Fire extinguisher situated less than 25ft from welding area;
- fire watch must be situated above and below welding location
- Always erect welding screen all around welding zone to protect from exposure to UV lights/ sparks
- Ensure hot work permit and point of work risk assessment identify the potential for ignition sources.

9.10 Implementation of corrective actions:		Method	Percentage	Points
a) Are corrective actions identified in investigation reports implemented to prevent reoccurrence? (0-5 points)	a	Documentation	100%	5/5
b) Are corrective actions identified in investigation reports implemented to prevent reoccurrence? (0-10 points)	b	Observation	100%	10/10

GUIDELINES

Verified by review of documentation and observing results of corrective actions implemented.

If corrective actions include administrative controls, implementation may be confirmed through documentation (e.g., training, memos, safety bulletins, etc.).

For corrective actions that are observable, award points that confirms implementation compared to the corrective actions identified.

Score:

- 0-5 points for documentation
- 0-10 points for observation

Documentation points are awarded based on the percentage of corrective actions reviewed in question 9.9b that can be verified as implemented.

Observation points are awarded based on the percentage of implemented observable corrective actions reviewed in 9.9b.

If corrective actions are not observable, the observation portion of this question may be marked not applicable (n/a). Provide justification.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of sampled investigation reports verified the below corrective action controls were implemented and in use as required:

- Site hazard assessment /Permits: to identify spark/ignition sources
- Training/Toolbox talk: supervisor to instruct the workers on use of the fire blanket for welding task
- Inspection: conduct inspection of tool storage to assess potential drop hazard; site leaders to perform documented drop object prevention audit
- Barricade/Warning : re-established signage around restricted access below tool storage area.

From observations: During the observation tours at sites, the applicable six corrective actions physically visible were observed. Examples included:

- Fire blanket was layout on ground below welding location underneath turbine deck
- two 25lbs fire extinguisher were situated within 10ft of observed welding task.
- fire watch must be situated above and below welding location
- welding screen were put all around a welding zone (4 sides)
- hot work permits was in use
- point of work assessment identified - potential for welding spark /other ignition

9.11 Are investigations completed in a timely manner? (0-5 points)	Method	Percentage	Points
	Documentation	100%	5/5

GUIDELINES

Verified by review of investigation reports.

Consider the complexity of the investigation to determine timeliness (i.e., length of time that the investigations were completed in relation to the date of the incident).

If no investigations have been required in the previous 12 months, review the process to determine that the employer indicates timeliness.

Points are awarded based on percentage of positive indicators.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of the sample investigation reports in comparison with the company procedure, criteria was met. Verification was conducted through review of 5 different investigation reports from 12months of records available, and identified that 5 incidents investigation reports were completed within between 24-72hrs of the incidents occurrence as required.

9.12 Do managers/supervisors ensure investigations are complete as required by the investigation procedures? (0-5 points)	Method	Percentage	Points
	Documentation	100%	5/5

GUIDELINES

Verified by review of investigation reports.

Investigation reports should be complete, including identifying causes and implementing corrective actions as outlined in the investigation procedure verified in question 9.5.

Points are awarded based on percentage of positive indicators.

Provide details/example(s).

■ FINDINGS / NOTES

From documentation: From review of sampled investigation reports in comparison with the FieldCore incident management procedure identified managers/supervisors are consistently ensures investigations are completed as required. Review identified the procedure requires managers/supervisor to ensures:

- Investigation are performed for all incidents, including injuries, potential severe event, near miss, stop work, harm to people, harm to environmental and property damage.
- investigation reports are review and approve/signed by managers/supervisor e.g. project (outage)manager and or supervisors.
- corrective actions are assigned to owners with target date for completion and tracked to closure (using Gensuite action tracking system)

9.13 Are completed investigation reports/results communicated to employees? (0-10 points)	Method	Percentage	Points
	Interview	95%	10/10

GUIDELINES

Verified by employee interviews.

Interviewees must be able to describe how investigation results are communicated.

Points are awarded based on the percentage of positive responses.

Provide details/example(s).

■ FINDINGS / NOTES

From interviews: Response from employees identified they were able to adequately describe how investigations result are communicated to them. Example of responses provided included through team meeting; toolbox talk; weekly safety meeting; monthly employees meeting; EHS alerts; RCA read across actions assignment; publication in health and safety SharePoint portal (intranet).

Negative responses identified few affiliates/ contractors were not able to fully explained how FieldCore communicates investigation results to its employees.

10 | SYSTEM ADMINISTRATION

System administration provides an evaluation of the overall effectiveness of the occupational health and safety management systems (OHSMS).

10.1 Is there a system to confirm:		Method	Percentage	Points
a) Management communicates health and safety issues to workers? (0-10 points)	a	Interview	100%	10/10
b) Workers can provide feedback on health and safety issues? (0-10 points)	b	Interview	100%	10/10

GUIDELINES

Verified by worker interviews.

- Interviewees must be able to describe how employees are advised of health and safety issues by management (e.g., newsletter, safety meetings, emails, posted bulletins, posters, etc.).
- Interviewees must be able to describe how they are able to offer feedback on health and safety issues (e.g., health and safety meetings, suggestion boxes, contacts with supervisor, etc.).

Points are awarded based on percentage of positive response.

Provide details/example(s).

FINDINGS / NOTES

From interviews: Response from senior manager, managers and supervisors identified there were able to describe how the company health and safety issues are communicated to employees. Examples of response provided included through regional bi weekly/monthly team /staff meetings; at site toolbox talk and weekly safety meetings; periodical companywide safety standdowns; regular email communication and annual safety week forum.

From interviews: Workers interviews confirmed there systems existed in the company to enable them consistently and promptly provide feedbacks in health and safety matters. Examples provided included discussing concern or feedbacks during regional teams meetings; with outage/site manager; through annual safety survey; submission of safety concern system of records, submitting concerns in safety system of record(Gensuite tool)

10.2 Is health and safety information readily available to employees? (0-5 points)		Method	Percentage	Points
		Interview	91%	5/5

GUIDELINES

Verified by employee interviews.

Health and safety information (e.g., hazards assessments, inspections, emergency response procedures, safe work practices/procedures, investigations, HSC meeting minutes, etc.) is readily available to employees.

Points are awarded based on percentage of positive responses.

Provide details/example(s).

FINDINGS / NOTES

From interviews: Response from employees interviewed identified they have full access to all health and safety information including procedures and hazards assessment required to perform their work safely. Example of response provided included safety procedures/policies/checklists are readily accessible through health& safety SharePoint portal; task risk assessment and field procedures (i.e. safe work procedures) accessible from GE method library (i.e. formal hazards assessment repository); health and safety notices and bulletin board.

Negative response identified some affiliate partner company /contractor workers do not have readily access to the FieldCore intranet safety portal and only have access to physical copies of procedures, safety alert information.

STRENGTHS

During the observation tour to active worksites, it was identified that FieldCore nine (9) life saving rules (LSR) posters with distinctive and conspicuous pictographs of each of the LSR where strategically posted around the company work areas including the lunchroom, turbine cogeneration building. This not only demonstrate the company strong safety culture but also promote employees and other worksite awareness and adherence to the life saving rules and promote overall health and safety of everyone working for or near FieldCore's operation.

10.3 Are health and safety records/statistics analyzed to identify trends on at least an annual basis? (10 points)	Method	Percentage	Points
	Documentation	100%	10/10

GUIDELINES

Verified by review of documentation.

Health and safety records/statistics can be done in many different ways including company specific monthly, quarterly or annual health and safety reports, analysis of injury reports, or graphical reports of Health and safety statistics to show trends.

Notes must provide details/examples of the records/statistics being analyzed, and any trends/gaps identified by the employer.

Points are awarded based on 100% positive indicators from documentation.

Provide details/examples.

FINDINGS / NOTES

From documentation: From review of FieldCore health and safety statistic /performance are generated and shared on fiscal weekly basis: Verification review was conducted through review of twenty (20) weeks reports (Jan- Oct 2024) records identified 20/20 data are analyzed and trended as per below.

- Number of recordable injuries per months
- 12months rolling I&I rate (in graphical representation)
- YoY comparison of total monthly recordable injury (i.e. 2023 vs2024)
- leading indicators (i.e. # inspection, audit, etc.)
- total # of Stop Work

Example: as shown from comparison review of January- Oct 2024 stats analysis identified the following trends/gaps as:

- zero recordable injuries month to month;
- zero potential severe event or incident month to month;
- Leading indicator trending upwards (i.e. increased # of inspections submitted e.g. hazard hunts, site safety inspections, etc.)

10.4 Is senior management/management held accountable for the implementation of the OHSMS? (5 points)	Method	Percentage	Points
	Interview	83%	5/5

GUIDELINES

Verified by senior manager and manager interviews.

Interviewees must describe their involvement in improving the performance of the OHSMS (including review, initiating improvements, and setting strategic direction) and how they are held accountable.

Points are awarded based on a minimum 80% positive interview results.

Provide details/example(s).

FINDINGS / NOTES

From interviews: Senior manager and manager interview responses identified they were able to describe involvement and accountability in the improvement processes of company health and safety management systems. Positive response included setting sub-regional annual safety targets (e.g. leading indicators, I&I rates) and reviewing with their direct reports. Response also included how they are held accountable by management such as through:

- regularly mid-year and annual performance evaluation process.
- projects health and safety performances including in comparison with regional targets.

Negative response included that part of their role do not required them to be involve in setting health and safety improvement initiatives or couldn't remember any them have been personally involved in.

SUGGESTIONS FOR IMPROVEMENT

Not all managers are involved in occupational health and safety management improvement process or held accountable for health and safety. Audit recommend company to set a process in plan for ensure all management are consistently involved in health and safety improvement process/initiative and to track their accountability in relation to their involvement level. This will aid the continuous improvement of the company overall OHSM

10.5 Is an OHSMS evaluation or action plan completed at least annually? (5 points)	Method	Percentage	Points
	Documentation	100%	5/5

GUIDELINES

Verified by review of previous evaluations.

Evaluations or action plans must be completed annually to support continuous improvement.

Points are awarded based on 100% positive indicators from documentation.

If the company did not perform a COR or SECOR audit or maintenance option the previous year, this question may be marked not applicable (n/a). Provide justification.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of FieldCore assurance procedure and continuous improvement process identified health and safety action plans and strategy priorities are developed annually by Regional EHS leaderships and implemented across the NAM and Canada region. Auditor review of the company 2023 & 2024 EHS Action Plans indicated it consisted of the below including completion timelines. As example: 2024 Action plan - identified the following health & safety priorities and strategies as:

- Injury reduction target
- I&I rate target (i.e. 0.87)
- Leading indicator target (audit/inspection, action closure target, etc.)
- Risk reduction projects
- EHS Operational rhythm

10.6 Are results from the OHSMS evaluation or action plan communicated to employees? (0-10 points)	Method	Percentage	Points
	Interview	100%	10/10

GUIDELINES

Verified by employee interviews.

Interviewees must be able to describe how the evaluation or action plan results are communicated to them.

Points are awarded based on percentage of positive responses.

If the company did not perform a COR or SECOR audit or maintenance option the previous year, this question may be marked not applicable (n/a). Provide justification.

Provide details/example(s).

FINDINGS / NOTES

From interviews: Employee interviews identified they were able to describe how action plans are communicated to them. Positive responses included health and safety action and priorities are usually communicated at the beginning of the year through either email from supervisor, discussed during the first sub-regional team meetings. Example statement heard was the Regional EHS manager is usually add it as agenda item and responsible for discussing it.

10.7 Was a plan developed to address identified OHSMS deficiencies from the previous evaluation? (0-5 points)	Method	Percentage	Points
	Documentation	0%	0/5

GUIDELINES

Verified by review of documentation.

To award points for this question, a plan must have been developed to address deficiencies identified in the past year. A plan format must include:

- measurable action items,
- proposed completion dates, and
- individuals responsible for follow-up.

If the company did not perform a COR or SECOR audit or maintenance option the previous year, this question may be marked not applicable (n/a). Provide justification.

Provide details/example(s).

FINDINGS / NOTES

From documentation: From review of the last management system audit report indicated no deficiency was found.

SUGGESTIONS FOR IMPROVEMENT

Finding indicated the company did not develop an action plan as result of the company previous OHSMS audit result because there was not deficiency found. However, the auditor recommendation that the company to always develop an action plan from the outcome of every OHSMS audit where there are deficiencies or not. Doing this does not only ensure the company conform to the COR programs requirements but will mostly importantly ensures identified actions or improvement opportunities are considered and communicated to employees. And in turn aids to strengthen and promote continued improvement of the company overall occupational health and safety management systems.

10.8 Has the plan been implemented? (0-10 points)	Method	Percentage	Points
	Documentation	0%	0/10

GUIDELINES

Verified by review of documentation.

Verify if the items identified in question 10.7 have been initiated or implemented.

Points awarded are based on the percentage of items initiated and/or completed on the plan.

This question may be marked not applicable (n/a) if question 10.7 has been marked not applicable. Provide justification.

Provide details/example(s).

FINDINGS / NOTES

From documentation: A review of the company last OHSM audit report verified no action plan was created because no deficiency was identified. Further finding identified the last audit completed for the company occupational health and safety management system was ISO 4500:2018 recertification (external) audit which the company used to renew its COR certificate in 2023 as per the ISO COR equivalency program. And from the review of the aforementioned ISO 45001 audit report, the company scored 100% and no non-conformance record as a result no action plan was created, consequently no specific OHSM evaluation related action was implemented.

■ SUGGESTIONS FOR IMPROVEMENT

Audit finding identified there was no action plan created by the company since there were no deficiency found on the last ISO 45001:2018 audit. However, its the recommendation of the of the auditor that the Company to need to always develop an action plan from all OHSMS audits whether there are deficiencies or not. Doing this does not only ensure the company meets the COR programs requirements but will also ensure any identified actions or improvement opportunities are consistently considered and implemented. This will in turn aids to strengthen and drives the continued improvement of the company overall occupational health and safety management systems.

CONCLUSION

It was my pleasure to conduct this internal maintenance audit on behalf of FieldCore Service Solutions Canada Company. I would like specially thank Andy, Fadi, Ahmed and Lisa for providing all the necessary information to enable me complete this audit efficiently.

I believe Field Core's management team is sincere in their commitment and efforts to ensure the health and safety of all their employees. The feedback from the audit interviews identified employees recognized that FieldCore management has heightening commitment and focus on health and safety in the past several years.

The work completed is just the beginning of a continuous task. The high priority given to health and safety must remain to ensure the program grows and improves over the coming years. The company health and safety management system are well developed and promotes continuous learning; however, some gaps were identified from this audit which is a testimonial that there is still opportunity for improvement. I believe when all identified gaps are [promptly address will go a long way to strengthen the health and safety management program of your estimate company

The requirement to maintain the Certificate of Recognition and to receive the W.C.B. incentives include submitting an annual maintenance audit for each of the next two years, 2024 and 2025. Thereafter, an external audit is required in 2026 to renew the Certificate of Recognition.

Once again, thank you all for your commitment to safety excellence.

Please contact me if you have any questions or require further assistance.

Sincerely,

Solomon Airebamen

Internal Auditor

PRE-AUDIT LETTER / PLAN

Since this this is internal audit, email was sent to notified relevant management and team members.

[pre-audit letter- nov 2024.pdf](#)

SUGGESTED DOCUMENTATION

Element One - Management Leadership

- Health and Safety Corporate Policy Statement/Policy
- Written Assignment of Responsibilities and Accountabilities for:
 - Management
 - Supervisors
 - Workers
 - Contractors/ Sub-contractors / Visitors
 - Safety Committee
 - Performance Reviews/Employee Evaluations
- Process for Right to Refuse Dangerous Work

Element Two – Hazard Identification

- Organizational Chart
- Inventory of Job Tasks
- Job Descriptions
- Hazard Assessments / Job Task Analysis including:
 - Ø Health and Safety risks
 - Ø Rating system for risks
 - Ø Prioritization of risks/ job tasks
 - Ø Documentation of training and worker involvement in risk analysis
 - Ø Policy/Procedure for review and updating of Hazard Assessments
- Equipment Hazard Assessments
 - Facility Hazard Assessments
- Site Specific Hazard Assessment Policy
- Ø Process
- Ø Completed forms
 - Policy/procedure for reporting hazards/concerns/unsafe conditions.

Element Three - Hazard Control

- Hazard Controls including:
 - Ø Engineering, Administrative, PPE
 - Ø Safety work procedures/ practices
 - Ø General rules
 - Ø Work schedules/ job rotation procedure
- Maintenance Policy/ Preventative Maintenance Program
 - Ø Tools
 - Ø Equipment
 - Ø Vehicles
 - Ø Facility
- Employee Enhancement Program/ Disciplinary Policy
 - Ø Rewards/Disciplinary actions re: health and safety
- Workplace Violence
 - Ø Violence Prevention policy
 - Ø Violence Prevention procedures
 - Ø Harassment policy
 - Ø Harassment procedures
 - Ø Training

Element Five – Qualifications, Orientation and Training

- Hiring/Training policy/ Application process/ Pre-screening processes
- Orientation package/ Orientation checklist
- Training materials/ Training records
- On-the-job training documentation
- Competency training (documentation, tests)

- Management Leadership Training (Managers/Supervisors)
- Refresher Training

Element Six – Other Parties at or in the Vicinity

- Policy/process to address other parties in vicinity
- Process for selecting other employers or self-employed persons
- Process for monitoring parties on site
- Other Party orientations
- Ongoing communication records between your company and other party
- Process for non-compliance

Element Seven – Inspections

- Inspection Policy/ program
- Ø Inspection checklists (blank and completed)
- Ø Documented training for inspection teams
- Corrective Action Register (tracking system for concerns and deficiencies)

Element Eight – Emergency Response

- Emergency Response Plan including:
 - Ø Evacuation procedures
 - Ø Communication procedures
 - Ø Responsible Personnel/Training record
 - Ø Emergency numbers
 - Ø Documented emergency drills or tabletop exercises (planned and actual)
 - Ø First Aid Training records (certificates)

-

Element Nine – Incident Investigation

- Accident/Incident Investigation information including:
 - Ø Policy/Procedure (Reporting/Investigating)
 - Ø Forms – blank and completed
 - Training of staff
 - Completed Reports (Near miss, first aid, incidents, accidents, property damage, etc.)
 - Completed Investigations
 - Communication for sharing of investigation results to all staff
-

Element Ten – System Administration

- Communications:
 - Ø Toolbox meetings
 - Ø Bulletins/ Newsletters
- Statistic reporting system/documents
- Previous Health and Safety Evaluations/Audits
- Action plan from previous evaluations

AUDITOR DISCLAIMER

AUDITOR CODE OF ETHICS AND DISCLAIMER STATEMENT:

The Audit was conducted with the utmost integrity, confidentiality and no conflict of interest. The facts stated in the audit have been recorded accurately and according to the information received at the time of the audit. The intent of the audit is to give guidance, enhance current programs and provide suggestions for improvement, not to undermine any current processes in place, or to assume liability for changes or use of the document for any reason other than the original intent. I agree to follow the standard Code of Ethics and to submit the audit within an acceptable time frame and address all deficiencies in a timely manner.

ADDITIONAL INFORMATION (OPTIONAL)

Below are other Suggestion for improvement not included in executive summary and corresponding element numbers.

1.6

Although majority of employees were able to discussed their basic OH&S rights, but few were unable to explained their legislated health and safety responsibilities. Auditor recommends company utilize one of its regular employee engagement forums such as the monthly employee meeting to discuss workers legislated health safety responsibilities to ensure every employee have adequate knowledge of their workers responsibilities as specified in the AB OH&S legislation

1.12

During site tour one of the Ontario site, auditor could not find any hard copy of the provincial ON OH&S legislation handbook readily available in FieldCore work location. To meet this requirement and ensure employees have ready access to the legislation, auditor recommend the company consistently provide or allocate copies of current Occupation health and safety legislation booklets to every site in every province of operation.

2.4

Since auditor could not reviewed all formal hazards assessments related to all jobs, it could be determined if all health and safety hazards were identified/ evaluated. however, its auditor recommendation for company to address missing formal hazard evaluation for the two tasks in Borescope inspection position (i.e. camera, and visual inspection) and missing safety hazard (violence), health hazard (i.e. harassment & bully) information in all the company formal hazards assessment. When all formal hazards are complete, ensure to provide employees with awareness on potential hazards and controls in place to mitigate against incident and injuries.

2.6

Audit finding identified majority of managers are not involved in the formal hazards assessment process as required. Consequently, auditor recommend create an action plan to promptly address this gap and ensure managers are consistently participating in the development and or review of formal hazard assessments. Doing this will drive safer workplace and promote all level of employees' involvement in the hazards assessments process and strengthen the overall company OHSM systems.

2.10

From the review of FieldCore risk management procedure identified the procedure did not contain a specified a pre-determined frequency for review of the task risk assessment (i.e. formal hazards assessment) and the requirement of updating the TRA from outcome of safety inspections.

Based on the above findings, auditor recommend the company to conduct a review of their risk management procedure and includes: *i) the requirement for a predetermined frequency or timeline for the task risk assessment revision; and ii) the criteria of updating the task risk assessment when an inspection identifies a new hazard.* Auditor believe doing this will ensure any new / emerging hazards and controls are proactively evaluated, controlled and made known to employees to promote the overall health and safety of the company's workforce.

4.2

Audit review identified that FieldCore have not established a joint health and safety commitment or representative. From audit review, it has been identified that FieldCore regularly employs more than 20 employees for work in Alberta. Consequently, it's

the auditor recommendation that FieldCore immediately establish a joint health and committee consisting of a minimum 2 workers and 2 managers as required by Alberta OH&S Legislation (part 2 of AB OHS Act).

4.4

Audit finding identified the Company have no written HSC duties as it does not currently have a functional health and safety committee. Auditor recommend that to promptly set up a joint workers health and safety committee and have a written duties in place for the committee as required by Alberta OH&S legislation. Auditor also recommend for this to be establish before the next auditor to promote the continued strength of the company internal responsibility system and overall health and safety management improvement.

4.5

Audit identified the company do not currently have any health and safety committee member training record available as required. Auditor recommend that as soon as the company institute a joint health and safety committee and the members are known, to schedule training for the members as specified in part 13 of Alberta OH&S code. Doing this ensure the continue improvement of the company occupational health and safety management system.

4.6

Audit finding identified the company do not currently have health and safety committee members appointed. Therefore, its the auditor recommendation that the company schedule training for the HSC members as specified in part 13 of Alberta OH&S code as soon as the company institute its joint health and safety committee and the members are know. Doing this ensure the continue improvement of the company occupational health and safety management system.

4.7

Audit has identified no HSC members' activities are happening in the company as required because there is no active health and safety committee. Hence, auditor recommend the company to establish a term of reference and institute a joint health and safety committee, and ensure the term of reference clearly specify the requirement for the HSC involvements in health and safety activities. The auditor further recommends that the company to complete this action before the next audit to ensure the continuous improvement of its HSMS

4.8

Audit has identified the company has not established a health and safety committee as required. Therefore, its the auditor recommends that company to establish a term of reference and institute a joint health and safety committee, to also ensure the term of reference/procedure to include a clear requirement for the HSC members for handling employees' health and safety concerns. Auditor further suggest the company to complete this action before the next audit in 2025 to ensure the continuous improvement of its HSMS

4.9

This audit has identified the company has not established a health and safety committee as required. Consequently, the auditor recommends that company to establish a term of reference that includes a include a clear guideline for the HSC members to handle employees' health and safety concerns and complaints. Auditor further suggest the company to complete this action before the next audit to ensure the continuous growth of the company health and safety management systems.

4.10

Audit has identified the company has not established a health and safety committee as required. Therefore, its the auditor recommendation for the company to establish a term of reference and institute a joint health and safety committee, and ensure the term of reference clearly specify the requirement or procedure for HSC members to addressing or making recommendation to management. Doing this will enhances workers continued involvement and participation in the company health and safety management and improvement process.

4.11

Audit finding identified there were no record of employee's health and safety concern/complaints were due to not existence of the required health and safety committee. Therefore, the auditor recommends the company to immediately establish a term of refence to establish joint health and safety committee. Also, the company to institute a term of reference and ensure it contain the process including timeline for handling employee complaints. A prompt completion of this action will not only ensure the company meets its AB OH&S legislative obligations, but also enhances the continued improvement the company overall occupation health and safety management systems

4.12

This audit identified no record was found for HSC meeting taking place because the FieldCore is yet to establish an active health and safety committee as required. Consequently, its is the auditor recommendation for the company to immediately institute a term of reference for a joint health and safety committee and to ensure the term of reference clearly specify the requirement for a frequent meeting of the committee members as per Alberta OH&S legislation. This will enhance workers continued involvement and participation in the company health and safety management and improvement process.

4.13

This audit identified no record of HSC involvement or review of inspection is available due to FieldCore lack of an active health and safety committee as required. Consequently, its is the auditor recommendation for the company to immediately institute a term of reference for a joint health and safety committee and to ensure the term of reference clearly specify the requirement for a frequent workplace inspection involvement for the committee members as per Alberta OH&S legislation. This will enhance workers continued involvement and participation in the company health and safety management and improvement process.

4.14

This audit identified no record of HSC member contact information was available because FieldCore does not have a functional joint health and safety committee as required. Therefore, its the auditor recommendation for the company to promptly establish a term of reference, institute a joint health and safety committee. And importantly to ensure the names and contact information of the HSC members are made known to all the company employees, including posting at the company workplace e.g. at the

notice board, intranets, etc.). Doing this will not only create adequate employees' awareness but enhances continuous growth and continued improvement of the company overall health and safety management systems

8.3

Audit finding identified that majority of the company employee are not trained in first aid as part of emergency response training received. Auditor recommend that the company consider training many of their employees (e.g. manager/supervisor/team leads) in first aid training to ensure there are adequate and competency first aider available to cover its operational needs to ensure the safety of employee at all time.

8.6

Auditor review of available/ sample mock drill report from a customer site didn't not include complete information of how all the identified deficiencies were closed. Auditor recommend the company to ensure information from a customer ERP drill including the deficiency closure are made available to its employee are fully familiar with the customer site emergency

10.4

Not all managers are involved in occupational health and safety management improvement process or held accountable for health and safety. Audit recommend company to set a process in plan for ensure all management are consistently involved in health and safety improvement process/initiative and to track their accountability in relation to their involvement level. This will aid the continuous improvement of the company overall OHSM

10.8

Audit finding identified there was no action plan created by the company since there were no deficiency found on the last ISO 45001:2018 audit. However, its the recommendation of the of the auditor that the Company to need to always develop an action plan from all OHSM audits whether there are deficiencies or not. Doing this does not only ensure the company meets the COR programs requirements but will also ensure any identified actions or improvement opportunities are consistently considered and implemented. This will in turn aids to strengthen and drives the continued improvement of the company overall occupational health and safety management systems.
