

GE Vernova's Gas Power OFS Environmental,

One Field Services (OFS) is committed to protecting our employees, customers, contractors and others impacted by our activities from harmful outcomes. We will act with integrity to ensure compliance with all regulatory, customer and other applicable requirements, setting measurable objectives and KPI's that drive a culture of continuous improvement of our EHS management with a goal to do no harm.

Our Goal:

➤ No harm to our employees by:

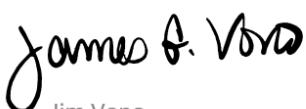

- Providing Life Saving Rules that prevent or mitigate the **primary risks** that may occur in our day-to-day operation
- Providing safe and healthy working conditions for the prevention of work-related injury and ill-health
- Proactively conducting EHS training and education based on role and job associated risk
- Eliminating and reducing hazards using Risk Based Life Saving Rules
- Providing employees with suitable and sufficient resources.
- Empowering employees to STOP WORK when they feel that it is unsafe to proceed

➤ No harm to the environment by:

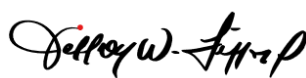

- Preventing pollution
- Minimizing adverse environmental impacts of our fixed facilities, services and project sites

We will ensure open and effective consultation and communication with our employees, contractors, customers and other interested parties and actively encourage our employees and contractors to participate in and contribute to the Life Saving Rules and strengthen EHS risk and environmental impact reduction.

EHS is the core responsibility of every employee in our business. It is required that we all share the responsibility to protect ourselves and our co-workers, customers, visitors to our sites, the community and the environment.
