## Employee Evaluation

Comment:

During the first half of the year, I remained focused on delivering results that support GE Vernova's commitment to Safety, Quality, Delivery, Cost, and Innovation. I am currently leading the execution of the world's first 7HA.03 Major Outage, working closely with Engineering, Product Line Leadership, Services, and other cross-functional teams to validate new tools, equipment, and maintenance methods for future global deployments. This effort demonstrates the **One Team** mindset by bringing together multiple organizations to solve complex technical challenges while maintaining a strong focus on safe execution, quality, and continuous improvement. In parallel, I have continued to identify opportunities to improve how we prepare our workforce by driving Lean solutions that increase training effectiveness and accelerate Field Engineer readiness. I also led the development of several strategic training initiatives to support both customer and business needs. This includes developing two new E4 Point tools courses for Field Engineers and Craft, creating the Accelerated Gas Turbine Entry-Level program to reduce training cycle time and address increasing demand, and leading the development of new simulation-based on-the-job training to enhance customer support and operational readiness. These initiatives reflect GE

Vernova's focus on **Innovation** and **Customer Success** by introducing modern learning solutions that improve technical capability, accelerate workforce development, and ensure our teams are prepared to support the latest gas turbine technologies. Throughout these efforts, I have remained accountable for delivering high-quality outcomes while collaborating across functions to achieve shared business objectives.
