

GE VERNOVA

Gas Turbine - Entry Level Training

I-GAS10902

Internal

GEV Course Outline

Course Description

The Entry Level Gas Turbine Program (ELT GT) serves as the key entry point for college graduates and newly hired technical personnel entering Power Services field engineering and, as such, is the training ground for field service careers. It provides the practical skills and product knowledge necessary to provide high quality customer service on GE power generation equipment.

Continuous Improvement

We are committed to continuous improvement at GE Vernova, which includes implementing improvements to our training, including design, methods, content, and delivery. Customers should understand that these changes are made as they are developed, and thus, may impact the content of this course outline before we can issue a revised outline. As these changes are intended to benefit our customers and improve our product, GE Vernova reserves the right to modify our training courses accordingly.

Duration

116 days

Target Audience

- Field Engineer

Prerequisites

Participants should have:

Nominated by service managers or other qualified personnel in the Power Services. Four-year college engineering degree or a four-year engineering technology degree in the following:

- Mechanical, Electrical, Chemical or Industrial Engineering
- Marine Engineering - Power Plants/Propulsion
- Two-year Associate in Applied Science degree or comparable military training with some work experience with preference to power generation and delivery equipment maintenance, repair, and troubleshooting
- Experience in Gas Turbine operations, maintenance and/or repair with preference to power generation and delivery equipment

Special Requirements:

- Working knowledge of basic computer software packages: (including Microsoft Word, Excel, Internet Explorer and PowerPoint)
- Basic knowledge of Adobe Acrobat
- Install and utilize new computer programs
- Spreadsheets, Data bases, Web Browsers

Maximum Class Size **18** participants.

Learning Objectives

This course will provide basic knowledge on the following:

- Gas Turbine components, how each component functions relative to all other turbine components, and how each component is physically attached to and located within a gas turbine
- Usage of reference material to identify the parts, the function or purpose of the elements of the components
- Identify what typical materials, features, and processes are used in gas turbine construction and why those choices are appropriate
- Safety concerns involved in the inspection, and maintenance activities for a gas turbine
- Required maintenance procedures and demonstrate the ability to supervise routine maintenance outage activities

Qualifications are tasked-based in the following topic areas:

- Heavy Duty Air Cooled Gas Turbine Maintenance
- Generator Mechanical Maintenance

Course Content

LESSON 1 - ORIENTATION/ENVIRONMENTAL, HEALTH & SAFETY

- A. Introduction to GE, GE Policies and Practices
- B. Instruction on various EHS topics such as Confined Space, Lock Out/Tag Out, Hazcom, etc.

LESSON 2 - QUALITY & PROFESSIONAL SKILLS:

- A. Various GE Quality tools, Human & Organizational Performance, Diversity, Sexual Harassment, etc.

LESSON 3 - BASIC ENGINEERING

- A. Instruction on engineering fundamentals such as Precision Measurement, Rigging, Drawings, etc.

LESSON 4 - GAS TURBINE TECHNOLOGY

- A. Instruction in Gas Turbine Theory, Design, Construction, Operation & Maintenance

-Confidential-

LESSON 5 - ELECTRICAL & GENERATOR

- A. Instruction in Basic Electrical Theory and Generator Design, Construction, Operation & Maintenance

LESSON 6

- A. This formal training is supplemented by selected field training assignments, working with mentors and other experienced Field Engineers.
- B. The successful Entry Level Training graduate is expected to perform the duties of a productive entry-level Field Engineer, working with the guidance of an experienced Field Engineer.
- C. An On-The Job Training module will be assigned at the end of successfully completing the course.
